MESSAGE FROM THE NATIONAL STATISTICIAN

The Philippine Statistics Authority (PSA) is pleased to present the final report on the first nationwide survey on migration, the 2018 National Migration Survey or NMS 2018. NMS 2018 is a collaborative undertaking of PSA with the University of the Philippines System (UP System) through the University of the Philippines Population Institute (UPPI). NMS aims to provide information on the mobility of Philippine population in order to assist policymakers and program managers in designing and evaluating strategies for improving services and assistance to Filipinos going abroad or moving within the country. More particularly, NMS 2018 is intended to provide baseline information on international and inter-regional migration flows and major migration streams, types of migration and characteristics of migrants, patterns and processes of migration and factors that affect these patterns and processes.

NMS 2018 was funded by the Government of the Philippines. Field operations were carried out from 31 May to 11 November 2018 with 45,000 sample housing units or over 49,000 households visited to provide regional level data.

PSA would like to express its deepest gratitude to the members of the Interagency Committee on Migration Statistics for providing technical assistance, particularly in firming up the survey objectives, identification of data items and formulation of questions that would capture needed information based on finalized objectives; to the UP System and the UPPI for partnering with PSA in the conduct of NMS and for responsibly handling the field data collection activities up to reporting of the survey results.

Great appreciation is also extended to the NMS team of the PSA for their hard work and dedication: the staff of the Social Sector Statistics Service, Demographic and Health Statistics Division (DHSD), who worked tirelessly throughout all stages of the survey; selected staff of the National Censuses Service and Information Technology

and Dissemination Service for their support during the preparatory phase of the survey as well as in the estimation phase; the Finance and Administrative Service for its assistance in managing the logistics for support to operations; the staff of the Regional Statistical Services Offices and Provincial Statistical Offices for co-overseeing the data collection activities; and the 92 field teams composed of Field Supervisors and Field Interviewers.

Lastly, we are ever indebted to the survey respondents who generously shared their time and information which enabled us to gather crucial data for our country's future plans and programs.

CLAIRE DENNIS S. MAPA, Ph.D.

Undersecretary
National Statistician and Civil Registrar General
Philippine Statistics Authority

October 2019

MESSAGE FROM THE UP PRESIDENT

The University of the Philippines is proud to present the key results and findings of the 2018 National Migration Survey conducted by the Philippine Statistics Authority and the UP Population Institute.

This pioneering initiative lays the groundwork for future migration research, analyses, and policymaking by providing invaluable sets of data that were previously inadequate or unavailable.

With thousands of Filipinos having benefited from the migration decisions of their family members, there is great awareness of the occurrence and prevalence of migration in the country. Despite this common knowledge, however, there was a recognized need to systematically document and organize; and statistically translate the experiential narratives of this phenomenon. The Survey took on the crucial task of casting a wider net to hear and collect more of these stories so a bigger and clearer picture of Filipino migration and mobility may be seen.

What this means for all of us is we can now go beyond the few stories—both heartwarming and heartbreaking—that we hear or read about. What we have in this book is information that extends our knowledge about migration to more than just how much money our migrant workers contribute to the economy or how many of our fellow Filipinos are leaving or are already abroad.

Data on both the internal and international mobility and migration of the Philippine population is imperative if we expect the formulation of policies, programs, and interventions to be evidence-based. This Report is foreseen to spur more research into the many dimensions of mobility and migration. This may well be the catalyst for new inter- and multidisciplinary explorations of areas that are related to or stem from mobility and migration.

The conduct of the 2018 National Migration Survey was a monumental but necessary undertaking. I commend the Philippine Statistics Authority and the UP Population Institute for teaming up and taking on the challenge in the spirit of cooperation. As the national university of this country, UP will always make its expertise available to initiatives that are meaningful to the Filipino nation. Our people deserve no less. Mabuhay ang Philippine Statistics Authority! Mabuhay ang UP Population Institute!

DANILO L. CONCEPCION

President

University of the Philippines

INTRODUCTION AND SURVEY METHODOLOGY

The 2018 National Migration Survey (NMS 2018) is the first nationwide survey on migration in the Philippines. It was jointly implemented by the Philippine Statistics Authority (PSA) and the University of the Philippines through the Population Institute (UPPI), College of Social Sciences and Philosophy. Data collection took place from 31 May to 11 November 2018. Funding for the NMS 2018 was provided by the Government of the Philippines.

1.1 SURVEY OBJECTIVES

The NMS 2018 was designed to provide baseline information on internal and international migration of Filipinos. The study has the following specific objectives:

1. To estimate international and inter-regional migration flows and major migration streams;
2. To examine the different types of migration and characteristics of internal and international migrants;
3. To determine the levels, patterns, and processes of internal and international migration; and
4. To identify factors that are associated with the levels, patterns, and processes of internal and international migration.

The NMS 2018 aims to provide information on the mobility of Philippine population in order to assist policymakers and program managers in designing and evaluating strategies for improving services for, and assistance provided to, Filipinos going abroad or moving within the country

1.2 SAMPLING DESIGN

The Philippines consists of 17 administrative regions, each composed of provinces and, for some regions, highly urbanized cities (HUCs) or other special areas. Provinces are subdivided into cities and municipalities; HUCs, cities and municipalities are further subdivided into barangays. The barangay is the smallest local government unit. The country has 81 provinces, 145 cities including 33 HUCs, 1,489 municipalities, and 42,036 barangays.

The sampling design used for NMS 2018 ensured that the data collected is representative of the country as a whole, and for each of the 17 administrative regions. The sampling design involved 117 sampling domains (81 provinces, 33 HUCs, and three special areas, namely, Pateros, Isabela City, and Cotabato City). The sample selection methodology followed a two-stage stratified sampling design using the updated 2013 Master Sample Frame (MSF), which was designed and compiled by PSA to serve the needs of several surveys. The 2013 MSF was constructed based on the results of the 2010 Census of Population and Housing, and updated based on the 2015 Census of Population.

In the first sampling stage, 2,940 primary sampling units (PSUs) were selected through systematic sampling from the 117 sampling domains. A PSU could be a barangay, a portion of a large barangay, or two or more adjacent small barangays. In the second stage, an average of 12 (for HUCs) or 16 (for provinces) sample housing units were selected from each sampled PSU based on proportionate allocation and using systematic random sampling. In situations where a housing unit contains one (1) to three (3) households, all households were interviewed. In the rare situation where a housing unit contains more than three (3) households, no more than three households were interviewed. The interviewers were instructed to interview only the pre-selected housing units.

Replacement of housing units and households was allowed; replacements were pre-selected and were provided to the data gathering teams together with the list of original samples. A maximum of three (3) replacement households per sample PSU were provided. To prevent sampling bias, the data gathering teams were not allowed to make any changes in the pre-selected housing units (both originals and replacements) .

The NMS 2018 covered about 45,000 sample housing units, i.e., four (4) replicates of the 2013 MSF. All individuals in a sample housing unit/household aged 15 years and over who ever had an international migration experience were interviewed. For each sample housing unit/household, one individual age 15 and over who ever had an internal migration experience was randomly selected and interviewed. Similarly, one household member 15 or older who had no migration experience (non-migrant) was also randomly selected and interviewed.

1.3 QUESTIONNAIRES

Since the NMS 2018 is the country's very first nationwide survey on migration, the development of the questionnaires involved collaboration of various stakeholders representing government agencies, universities, and international agencies. Members of the Inter Agency Committee on Migration Statistics (IACMS) provided inputs as to what sets of information were to be derived from the survey (given its objectives), and the equivalent data items and questions that will capture those sets of information. The IACMS is composed of representatives from the Commission on Population, National Economic and Development Authority, Commission on Filipinos Overseas, the Philippine Overseas Employment Agency, the Bureau of Immigration, Bangko Sentral ng Pilipinas, Department of Foreign Affairs, Department of Interior and Local Government, the University of the Philippines Population Institute, and the Philippine Statistics Authority. The Scalabrini Migration Center and the Institute for Migration and Development Issues also provided invaluable inputs in the development of the questionnaires.

Two questionnaires were developed and used in the NMS 2018, namely: (1) Household Questionnaire (Form 1) and (2) Individual Questionnaire (Form 2).

The Household Questionnaire was used to collect information on all usual members of the household (de jure) and characteristics of the housing unit where the household was residing. The Household Questionnaire included questions on the number of household members and their demographic information (age, sex, and marital status), citizenship, education, economic activity, displacement, migration experience, and housing characteristics.

The respondent for the Household Questionnaire was generally the head of the household, his or her spouse, or any responsible adult household member who was considered able to provide the necessary information about the household members and housing characteristics. The Household Questionnaire has eight sections:

- Section A. Geographic Identification and Other Information
- Section B. Demographic Characteristics
- Section C. Education
- Section D. Economic Activity
- Section E. Migration Experience
- Section F. Internally Displaced Persons
- Section G. All Former Household Members Who Permanently Moved and Now Residing Abroad
- Section H. Housing Characteristics

The Individual Questionnaire was used to collect information from the eligible household members (15 years old and older). Among the eligible household members,

the following were interviewed: all those who ever had international migration experience, one randomly selected member who ever had internal migration experience, and one randomly selected member with no migration experience (non-migrant). The Individual Questionnaire contained questions on the sociodemographic profile and migration experience (in the case of migrants) of the above selected respondents, particularly on the following 10 topics:

Section A.	Geographic Identification and Other Information
Section B.	Respondent's Background
Section C.	Migration History
Section D.	International Migration
Section E.	Engagement in Migration Association and Training/Education Abroad
Section F.	Return Migration
Section G.	Internal Migration
Section H.	Current Job/Business and Remittances
Section I.	Migration Intentions
Section J.	Involuntary Labor/Work Arrangement

The NMS 2018 questionnaires were written in English, with Filipino translation for each question. Translations of the questions to six major languages of the country, namely, Tagalog, Cebuano, Hiligaynon, Bikol, Waray, and Ilocano, were also made available for use and reference of field interviewers and supervisors in the pertinent regions.

As the NMS 2018 field data collection employed computer-assisted personal interviewing (CAPI), the UPPI developed a CAPI data collection system using the Census and Survey Processing (CSPPro) software (version 7.1). CSPPro is a data entry and management software designed for surveys and censuses developed by the United States Census Bureau. Before deployment, the NMS 2018 data capture system was evaluated using the PSA's quality assurance procedures.

The entire survey protocol was reviewed and approved through the Statistical Survey Review and Clearance System (SSRCS) of the PSA. Approval for the conduct of the NMS 2018 was issued on 19 January 2018 through PSA Approval No. 1740.

1.4 PRETEST

Two pretests were conducted using paper questionnaires: Pretest I and Pretest II.

Pretest I

The first pretest had the following objectives:

1. Test the correctness and clarity of the questions;
2. Evaluate the skipping pattern and sequencing of questions;

3. Assess if the respondent's attitude, interest, and motivation to answer the questions can be sustained;
4. Determine the average output rate or quota per day of field interviewers; and
5. Determine problems that may be encountered during data collection.

Pretest I was conducted on 9 to 10 August 2017 in two barangays in Marikina City. As matter of protocol, coordinations were made with PSA NCR and PSA NCR II for assistance in making courtesy calls to the respective Barangay Chairmen of the pretest areas, and in locating samples for the pretest. Team approach was adopted for the activity to easily communicate and resolve any problems or issues during data gathering. Each interviewer was required to interview three (3) households and at least three (3) eligible respondents, or those 15 years old and over with at least one migration/movement (change of residence for 3 months or more) within the Philippines and/or in another country. A total of 22 respondents were interviewed. A debriefing was held on 11 August 2017 to discuss the experiences in the administration of the questionnaires, including problems encountered and recommendations for their resolution.

Pretest II

The second pretest had the following objectives:

1. Test the revised questionnaires;
2. Test the correctness and clarity of the questions;
3. Test actual field operations procedures;
4. Determine the output rate per day of the field interviewers; and
5. Identify other problems that may arise during the actual data collection.

Pretest II was conducted in two barangays in Ilocos Sur on 28 August to 1 September 2017. Coordinations with the PSA Regional Statistical Services Office-Region I (Ilocos Region) and with PSA Provincial Office-Ilocos Sur were made to seek assistance in making the necessary courtesy calls to concerned barangay officials and in locating sample households in the selected barangays. At least two (2) households were interviewed per interviewer each pretest day. In these households, all eligible individuals (age 15 and over, with internal and/or international migration experience) were interviewed. A total of 42 households and 57 individuals with migration experience were interviewed. The corresponding debriefing was held on 4 September 2017 to discuss the experiences in the administration of questionnaires, the problems encountered, and the recommendations and resolutions thereof.

1.5 TRAINING OF FIELD STAFF

The training of the field personnel was conducted in two stages. The first stage was the Task Force Training (Training of Trainers), and the second was the training of the interviewing teams. Both aimed to familiarize the personnel involved in the survey

with the objectives of the NMS 2018, concepts and definitions used, the procedures to follow for the conduct of the survey, and the use of tablet computers in the interviews.

The Task Force Training was conducted from 7 to 12 May 2018 in Quezon City. Members of the UPPI Central Team and the PSA staff who were involved in the design and preparation of the questionnaires and sampling design served as trainers. The trainees included the research staff and programmers of the UPPI Central Team, the Regional Coordinators and Regional Contact Persons, PSA Focal Persons from each of the regional offices, and one Field Supervisor per region.

A total of 13 second-level training sessions were conducted in various regions in the country from 21 May to 28 July 2018. These training sessions involved 340 field personnel (245 field interviewers, 62 field supervisors, 16 UPPI Regional Coordinators and Contact Persons, and 17 PSA Focal Persons). The trainers consisted of the UPPI Central Team assisted by PSA Central Office staff. Each of the six-day training covered discussions on the contents of the questionnaire, CAPI procedures, and field practice.

1.6 FIELDWORK

Data collection was implemented from 31 May to 11 November 2018 by 62 field teams. Each field team consisted of one Field Supervisor and three to four Field Interviewers. Regional Coordinators and Contact Persons supervised the field teams in their respective regions and undertook monitoring activities. Field check tables based on data from completed questionnaires were generated weekly by the central office and used to monitor progress and provide regular feedback to the field teams.

The PSA Regional Statistical Services Offices (RSSOs), the Commission on Population Regional Offices, and city and municipality officials provided logistical support during the fieldwork.

The Field Interviewers used tablet computers during the face-to-face interviews. The field teams employed Bluetooth® technology to synchronize, transfer, and share files among their members. The electronic files included assignments from the Field Supervisor to the Field Interviewers, individual questionnaires to be filled up by the Field Interviewers, and completed questionnaires submitted by the Field Interviewers to the Field Supervisors. The Field Supervisors transmitted electronic data files to the UPPI Central Office through the internet.

Upon completion of the fieldwork, the field teams conducted debriefing sessions. These sessions involved sharing of experiences, checking of data, and completion of administrative requirements.

1.7 DATA PROCESSING

The NMS 2018 data processing commenced nearly simultaneously with the data collection. Electronic data files were regularly synchronized by Field Supervisors to a Dropbox cloud server. These data files were regularly downloaded by the UPPI Central Team for quality control checks. Field check tables were generated to monitor the progress of the data collection and to check for completeness of the collected data. Any error or inconsistency in the data was immediately communicated to the field teams while they were still in the field area.

Secondary data editing started upon completion of data collection. Batch data editing was carried out using the CPro software package. The editing involved resolving inconsistencies, coding of open-ended questions, and verification of the Philippine Standard Occupational Classification (PSOC) and the Philippine Standard Industrial Classification (PSIC) codes. Because employment is an important aspect of migration, two training sessions were conducted for the verification of the PSOC and PSIC codes for the 18 occupation and industry variables in the questionnaires. The UPPI Central Team and PSA Central Office Staff served as resource persons of the training.

1.8 RESPONSE RATES

Table 1.1 shows the response rates for the NMS 2018. A total of 49,423 sample households were selected, of which 41,138 were occupied. Of the occupied households, 34,935 were successfully interviewed, yielding a response rate of 85%. The household response rate in urban areas is lower than in rural areas (77% and 90%, respectively).

Table 1.1 Results of the household and individual interviews

Number of household interviews, number of individual interviews, and response rates, by residence (unweighted), Philippines 2018 NMS

Results	Residence		Total
	Urban	Rural	
Household Interviews			
Number of households selected	20,783	28,640	49,423
Number of households occupied	17,171	23,967	41,138
Number of households interviewed	13,277	21,658	34,935
Household response rate ¹	77.3	90.4	84.9
Interviews with individuals age 15 years and over			
Number of eligible respondents ²	19,982	31,969	51,951
Number of eligible respondents interviewed	17,414	28,973	46,387
Individual response rate ³	87.1	90.6	89.3

1 Household response rate = Number of households interviewed/Number of households occupied

2 Excludes 2,526 eligible respondents who were overseas at the time of the survey

3 Individual response rate = Number of eligible respondents interviewed/Number of eligible respondents

In the interviewed households, 51,951 individuals age 15 and over were identified for individual interviews. Interviews were completed with 46,387 individuals. Among them were 31 respondents who are non-Filipino citizens; they were consequently excluded from the analysis. The response rate for the entire sample is 89%, with response rate among individuals residing in rural areas (91%) slightly higher than the response rate for urban areas (87%).

1.9 A NOTE ON REPORT TABLES

In this report, the numbers in the tables reflect weighted numbers. Percentages based on less than 25 unweighted cases are suppressed and replaced with an asterisk, while percentages based on 25 to 49 unweighted cases are enclosed in parentheses to caution readers when interpreting data that a percentage based on fewer than 50 cases may not be statistically reliable. All these percentages are not included in the analysis.

HOUSEHOLD POPULATION AND HOUSING CHARACTERISTICS

KEY FINDINGS:

- **Education.** Females generally have a better education profile than males. More females than males have tertiary level education. Conversely, there are more males than females who have elementary education. The gender difference in education levels favoring females is manifest in all the regions of the country.
- **Labor force participation.** There is also a distinct gender difference in labor force participation. A much higher percentage of males than females are currently working.
- **Overseas Filipinos (OF).** Nine percent of all households have at least one member who was out of the country at the time of the survey, with the percentage slightly higher in urban (9%) than rural (8%) areas.
- **Overseas Filipino Workers (OFW).** Twelve percent of all household have or had an OFW member. The percentage is higher in urban (13%) than in rural (12%) households.
- **Regional distribution of households with OFWs.** The regions with the highest percentage of households with an OFW member are ARMM (24%), Cagayan Valley (22%), and Ilocos (18%). Those with the lowest are Caraga (5%), MIMAROPA (7%), and Central Luzon (7%).

The total number of persons residing in the 34,935 households covered by the National Migration Survey is 159,519. These are persons whose usual place of residence is that particular household, whether or not they were physically there at the time of the survey. This is so because the survey was interested in the *de jure* population.

Household. A person or group of related or unrelated persons who live together in the same housing unit(s), who acknowledge one adult male or female as the head of the household, who share the same housekeeping arrangements, and who are considered a single unit

De jure population. All persons who are usual residents of the selected households, whether or not they stayed in the household the night before the interview

De facto population. All persons who stayed in the selected households the night before the interview (whether usual residents or visitors)

How data are calculated. All tables are based on the *de jure* population unless otherwise indicated.

2.1 CHARACTERISTICS OF THE HOUSEHOLD POPULATION

The household population had slightly more males than females, with a sex ratio of 102 males per 100 females. Three in ten (31%) were below 15 years of age while 8% were aged 60 years and over. The median age was 25 years for the total population, 24 years for men, and 25 years for women. More than half (55%) of the sample were never married, 39% were currently married. Of the latter, 29% were formally married and 10% were living in/were in consensual unions. Fifty-five percent were rural residents while 45% were urban residents (**Table 2.1**).

Table 2.2 shows the percent distribution of the household population age 5 and over by highest grade completed and by sex. The table shows that more females than males had a tertiary level education, either as a college graduate or with some college education (23% and 18%, respectively). In all, 21% of the total household population age 5 and over had reached tertiary level education and 12% had a college degree. The percentage with a college degree was higher among females (14%) than males (10%).

Tables 2.3 and **2.4** present information on the highest level of schooling attained by the household population age 5 and over differentiated by the background characteristics of age, residence, region, and wealth quintile. **Table 2.3** presents the profile for the male population and **Table 2.4**, the female population. Inasmuch as the age cut off is 5 years, it is to be expected that the percentage with no schooling is high at ages 5-9 years since a significant number of children in this age bracket may

not have started school yet. Starting at age 15-19 years, when it is expected that almost all would have started schooling, the results show that for both males and females, the percentage with no schooling increases with age, as correspondingly the percentage with more than secondary education decreases with age. The pattern implies an improvement in education profiles across generations, with the older population (60 years old and over) showing lower average educational attainment than younger cohorts.

As to residence, more urban than rural residents completed secondary education or higher, while more rural than urban residents had up to elementary education only. This pattern holds for both the male and female population.

There is a distinct socioeconomic gradient in highest level of schooling attained. Specifically, those from the lowest quintile had the poorest education profile, given that the biggest percentage of members of this sector (42% of males and 34% of females) had some elementary education only. The education profile consistently shifts toward higher percentages in the higher levels of schooling as wealth quintile improves, such that among those in the highest quintile, 47% of males and 51% of females had more than secondary education.

Among the regions, those with the highest percentage who completed high school or had more than secondary level education were NCR (57% for males, 62% for females), Ilocos Region (49% for males, 54% for females), and CALABARZON (48% for males, 54% for females). The regions with the lowest percentage were ARMM (24% for males, 30% for females), Eastern Visayas (31% for males, 39% for females), and Zamboanga Peninsula (33% for males and 40% for females). In all regions more females than males completed high school or had more than secondary education. Conversely, more males than females had no schooling or did not complete elementary level education.

Among the population of school age (ages 3-24 years), 70% attended school in SY 2017- 2018 (**Table 2.5**). There is a slight difference in school attendance in the past school year between females (71%) and males (70%), and between rural (71%) and urban (70%) residents. The regions with the highest percentage of school attendance were CAR (73%), Zamboanga Peninsula (73%), and Western Visayas (73%), while those with the lowest were ARMM (64%), Northern Mindanao (68%), and NCR (69%). The percentage who attended school in the last school year monotonically increases as socioeconomic status (proxied by the wealth quintile) improves. Of those from the poorest quintile, 68% attended; for the richest quintile, the corresponding percentage is 75%.

Of the household population aged 15 years and over, 57% were currently employed at the time of the survey (**Table 2.6**). The percent employed was much higher among males (70%) than females (43%). It was about equal for urban and rural residents

(57% and 56%, respectively). The regions that had the highest percentage of currently employed residents were the Zamboanga Peninsula (63%), NCR, Eastern Visayas, and Davao (all with 60% employed). The regions with the lowest percentage currently employed were Ilocos (53%), Caraga (53%), and Central Luzon (53%).

2.2 CHARACTERISTICS OF THE HOUSEHOLD

The households had, on the average, 4.5 members, with no substantial difference between rural and urban areas (**Table 2.7**). There was a small percentage of one-person households (7%), slightly more in rural (7%) than in urban (6%) areas. Male-headed households (78%) outnumbered female-headed households (22%), with a distinct dissimilarity by place of residence. There were more male-headed households in rural than urban areas (81% in rural vs. 75% in urban) and more female-headed households in urban than rural areas (25% in urban vs. 19% in rural).

As to distribution of households by wealth quintile (**Table 2.8**), there is a striking difference by place of residence. In urban households, the distribution is skewed toward the higher quintiles, i.e., the richest and the second richest represented 55% of urban households. The exact opposite pattern could be seen in rural households, wherein 54% belonged to the poor and poorest quintiles.

The regional distribution of households by quintile mirrors that of the urban-rural pattern. In the three most developed regions of the country (NCR, CALABARZON, and Central Luzon), which are also the most urbanized, households were predominantly in the fourth and fifth quintiles. In sharp contrast is ARMM, which had 63% of households in the poorest quintile. The other regions with the highest percentage of households in the poorest quintile were the Zamboanga Peninsula (42%), SOCCSKSARGEN (36%), and Eastern Visayas (35%).

a. Households with overseas Filipinos (OF), overseas Filipino workers (OFW), and members who permanently moved abroad (emigrants)

The inventory of household members followed the de jure type of enumeration. Following this approach, overseas workers who are out of the country for employment overseas are considered household members if they have been away for not more than five years at the time of the survey and are expected to be back within five years from the date of their last departure.

Table 2.9 shows the percentage of households with at least one overseas Filipino and at least one OFW member, whether currently or in the past. In all, 9% of all households had at least one member who was currently out of the country at the time of the survey (OF), slightly more in urban (9%) than rural (8%) households. The regions with the highest percentage with an OF member were Cagayan Valley (16%), Western Visayas (13%), and SOCCSKSARGEN (12%) while those with the lowest were MIMAROPA (6%), Caraga (6%), and Bicol (5%) (**Figure 2.1**). The percentage of

Overseas Filipino (OF). A Filipino who is outside of the Philippines at the time of interviewer's visit. In the survey, this is measured based on the question "Is (NAME OF HOUSEHOLD MEMBER) currently outside the Philippines?"

Overseas Filipino Worker (OFW). A Filipino who is engaged in or has been engaged (in the past 12 months) in a remunerated activity in a state of which he/she is not a legal resident, or on board a vessel navigating the foreign seas other than a government ship used for military or non-commercial purposes or on an installation located offshore or the high seas.

The measure of OFW in this report is based on the question "Was/Is (NAME OF HOUSEHOLD MEMBER) an OFW? Responses could be either of the following: (1) Yes, currently within the last 12 months; (2) Yes, prior to the last twelve months; and (3) No.

Former household members now living abroad (Emigrants). All household respondents were asked if there were members who used to live in the household in the past 5 years but are now living permanently abroad.

Sample: Households

households with an OF member steadily increases as the wealth quintile improves. Among the poorest households, 3% had an OF member, compared to 16% among the richest.

Of all households, 12% had an OFW member, either within the past 12 months or earlier than the past 12 months. Similar to urban-rural pattern for households with OF, there were slightly more households with an OFW member in urban (13%) than rural (12%) areas. The percentage with an OFW member likewise increases with improvement in the wealth quintile status. Only 4% of the poorest households had an OFW member; the corresponding percentage for the richest was 25%. The regions with the highest percentage of households with an OFW member were ARMM (24%), Cagayan Valley (22%), and Ilocos (18%). Those with the lowest were Caraga (5%), MIMAROPA (7%), and Central Luzon (7%) (**Figure 2.2**).

Very few households (1.4%) had members who used to live in the household in the past 5 years but are now living permanently abroad (emigrants), slightly higher in urban (1.5%) than rural (1.4%) households. A higher percentage of the richest households had an emigrant (3.4%) compared to less than one percent (0.5%) in the lowest quintile. The regions with the highest percentage of households that have a recent emigrant were CALABARZON (3.5%), CAR (3%), and Ilocos (2%).

b. Forced migration among the household population

During the survey, the household respondent was asked if there were any household members who joined the household in the past 12 months prior to the survey, and if these household members moved to the current residence due to natural or man-made calamities, peace and order problems, or relocation due to other reasons (e.g., demolition of former residence). These factors are indicators of forced migration and can be used to ascertain the prevalence of internal displacement due to natural and man-made calamities.

Results show that such type of move is an uncommon event. Overall, less than one percent (0.4%) of the households had a member who joined the household/moved to the current residence for any of those reasons (See **Table 2.9**). Still, there are some notable variations. SOCCSKSARGEN had the highest percentage with an internally displaced member (2%), followed by Bicol and MIMAROPA, both at 1% of households.

Figure 2.1 Households with members currently overseas by region

Percentage of households with overseas Filipino (persons outside of the country during the time of the survey) by region, Philippines 2018 NMS

2.3 CHARACTERISTICS OF HOUSING UNIT

Table 2.10 shows the distribution of households by tenure status of their housing unit. Over half (58%) of all households owned their house and the lot it stands on. Around one-fifth (24.5%) owned the house in their current residence but not the lot the house stands on; some of these households were paying rent for the lot while others were not (with or without the lot owner's consent). Those who were renting both house/room and lot made up 17% of the households.

More rural residents owned their house and lot (61%) compared with urban residents (55%), while a much higher percentage of urban residents were renting (17%) compared to rural residents (3%). Those who owned their house on rent-free land with consent of the owner was higher in rural (25%) than urban households (14%). As expected, the percentage who owned their house and lot increases with the wealth quintile, at 35% among the poorest and rising to 79% among the richest.

Figure 2.2 Households with overseas Filipino workers by region

Percentage of households with overseas Filipino workers (OFW) by region, Philippines 2018 NMS

The percentage of households that owned their house and lot was lowest in the NCR (44%). Perhaps because of this, NCR had the highest percentage of households renting (31%). It is also in Western Visayas where the percentage that owned their house on rent-free lot without the owner's consent was highest (4%). Cagayan Valley had the highest percentage of households that owned their house and lot (76%).

The housing characteristics of the households are shown in **Table 2.11**. Overall, 92% of households had electricity, more so among urban (96%) than rural (89%) households. Majority of the houses were a single house type (92%), a feature found in almost all rural households (97%) but less so in urban households (87%). The main materials of the roof and outer wall were mostly strong materials or a mix of strong and light materials. The main material of the floor was likewise mostly strong material like cement, ceramic tiles or marble. Having strong materials for roof, outer wall and floor was more common in urban than rural houses.

Majority of households in both urban or rural areas owned mobile phone (88%) and television set (80%) (**Table 2.12**). Refrigerators and washing machines were owned by 44% and 42% of the households, respectively. Ownership of these household effects, as well as stove, CD/DVD player, audio component, karaoke/videoke unit, personal computer, airconditioner, landline telephone was higher in urban than rural households. In contrast, ownership of radio was higher in rural (34%) than urban areas (30%).

Ownership of motor vehicles (cars, jeep or van) was higher in urban (13%) than rural (8%) areas while ownership of motorcycle or tricycle, and of motorized boat was higher in rural (42%) than urban (39%) areas.

CHARACTERISTICS OF RESPONDENTS

KEY FINDINGS:

- **Age:** Half of respondents are below 40 years old.
- **Sex:** There is an equal number of male and female respondents.
- **Marital Status:** A big majority (67%) are currently married or in a live-in arrangement.
- **Education:** Females have a better education profile than males.
- **Employment:** Half of all respondents are currently employed, much higher among males (67%) than among females (39%).
- **Occupation:** Males work mostly in elementary occupations; as skilled agricultural, forestry and fishery, plant and machinery operators; and as craft and related trade workers. Females are mostly employed as service and sales workers, in elementary occupations, and as professionals.
- **Industry:** The top three major industries that the currently employed work in are agriculture, forestry and fishing (24%), wholesale and retail trade (18%), and construction (10%).

This chapter presents a profile of the 2018 National Migration Survey respondents. The profile describes characteristics of survey respondents such as age, sex, marital status, employment, and wealth status. These characteristics are useful for understanding the factors that affect migration behavior.

3.1 BACKGROUND CHARACTERISTICS OF RESPONDENTS

The respondents are about evenly divided by sex, with 50% males and 50% females.

Patterns by Background Characteristics

By age, about half (54%) of all respondents were below 40 years of age. The percentage younger than 40 years is higher among males (56%) than females (52%).

About a third (34%) of the total sample were never married. Again, the percentage never married is higher among males (39%) than females (30%). The most common marital status is currently married, either formally or in a common law/live in arrangement (58%). A higher percentage of females (9%) than males (2%) were widowed (**Table 3.1**).

In terms of educational attainment, the biggest number of respondents completed secondary education at 26%, both for the total sample and for the male and female subsamples (**Figure 3.1**). Females have a somewhat better education profile than males as more of them either have some college education (11% of females vs. 10% of males) or earned a college degree (17% of females vs. 11% of males).

When it comes to employment status, there is a distinct gender difference. Specifically, the percentage currently employed was much lower for females (39%) than for males (67%). Overall, majority of the respondents (53%) were currently employed (**Figure 3.2**).

Figure 3.1 Educational attainment of respondents

Percentage of respondents age 15 and over, by highest grade completed and by sex, Philippines 2018 NMS

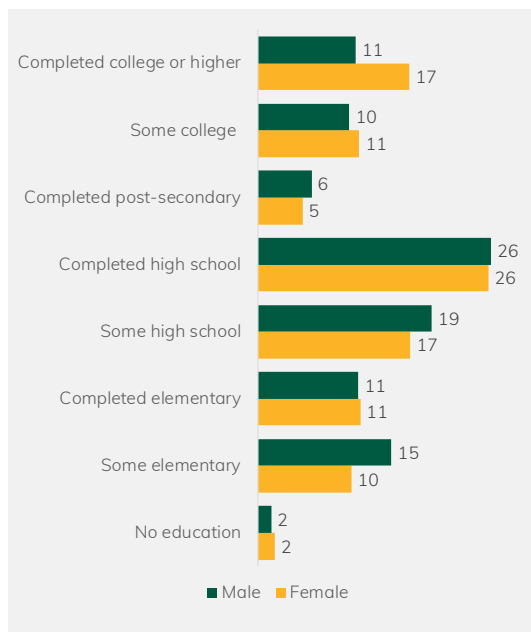

Figure 3.2 Employment status of respondents

Percentage of respondents age 15 and over, by employment status and by sex, Philippines 2018 NMS

There were more rural (54%) than urban (46%) residents, with a slightly higher percentage of rural residents among males (55%) than females (53%) (**Table 3.1**). The weighted distribution of respondents by region follows the regional distribution of the total population. In all, a little over a third (38%) of all respondents came from the three most populous regions of the country, namely, the National Capital Region, Central Luzon, and CALABARZON.

Roman Catholicism is the most common religion of respondents, with 79% declaring that they were Roman Catholics. About 5% belonged to the Islamic faith while the rest belonged to a variety of non-Catholic Christian religions. A very small percentage (0.2%) professed no religion at all.

For self-identified ethnicity, the three ethnic groups with the most number of members are Tagalog (24%), Cebuano/Bisaya (23%), and Ilocano (10%). In all, 89% of all respondents belonged to one of the 14 distinct ethnic groups listed in **Table 3.1**, while 11% belonged to ethnic groups that together comprise the “Others” category (classified as such because their members each comprised less than 0.3% of all respondents).

3.2 CHARACTERISTICS OF THE EMPLOYED RESPONDENTS

Table 3.2 presents the characteristics of the currently employed respondents of the 2018 NMS. These respondents comprised 53% of the total sample or 24,479 of 46,355 respondents.

Patterns by Background Characteristics

The age distribution of employed respondents reflects the age pattern of entry into the labor force. Only 3% of the currently employed 2018 NMS respondents belonged to the age group 15-19 years as most people of this age are expected to still be in school. Similarly, the percentage of currently employed belonging to the age group 60-64 years and 65 years and over is lower than in the total sample because of the expected exit from the labor force of older persons.

More than six out of 10 currently employed respondents were currently married or in a live-in arrangement, with a little bit more females (69%) than males (61%) belonging to this category.

The education profile of the currently employed resembles that of the total sample in that the most common educational attainment is having completed high school education. There is a notable gender difference in educational attainment, however. Among currently employed females, 26% completed a college degree; the corresponding percentage for men was only 11%. In all, 37% of currently employed females had at least a college education while only 21% of men had similar educational attainment.

By place of residence, there was a higher percentage of females (49%) than males (44%) residing in urban areas.

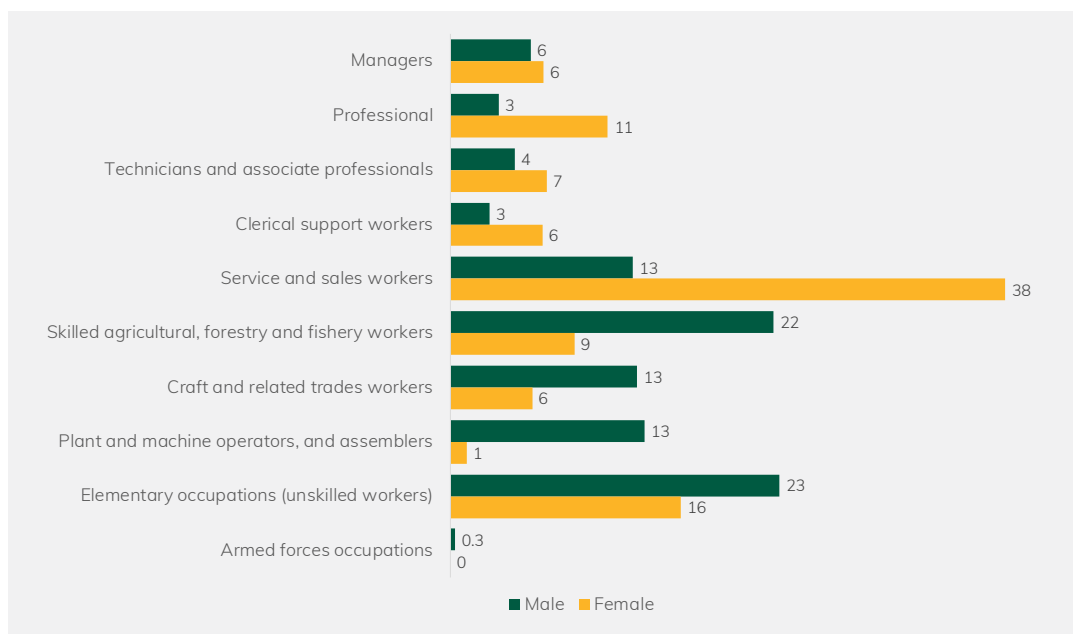

Employment Characteristics

The top five occupation categories of the currently employed respondents were service and sales workers (22%), elementary occupations/unskilled workers (20%), skilled agricultural, forestry and fishery workers (17%), and crafts and related trades workers (10%) (Table 3.3, Figure 3.3). There is a very striking sex difference in the occupations that males and females were engaged in. Among males, the top five occupations were elementary occupations (23%), skilled agricultural, forestry and fishery workers (22%), plant and machinery operators (13%), craft and related trade workers (13%), and service and sales workers (13%). On the other hand, females were mostly employed as service and sales workers (38%), followed by elementary occupations/unskilled workers (16%), professionals (11%), clerical support workers (6%), and skilled agricultural, forestry and fishery workers (9%).

There were three major industries that the currently employed worked in: agriculture, forestry and fishing (24%), wholesale and retail trade (18%), and construction (10%). Again, there was a notable sex difference. More males than females were employed in agriculture, forestry and fishing (30% of males vs. 13% of females) while more females than males worked in the service industry, particularly, wholesale and retail trade (30% of females vs. 11% of males). Construction and transportation, as well as storage were also male-dominated industries while service industries such education,

Figure 3.3 Occupation of respondents by sex

Percentage of respondents age 15 and over, by major occupation groups and by sex, Philippines 2018 NMS

accommodation and food service activities, human health and social work activities and other service activities were female-dominated (**Figure 3.4**).

In terms of class of worker, the highest percentage of the currently employed worked for private establishments (34%), followed by the self-employed without any paid employee (29%), those who worked for private households (18%), and those who worked for government/GOCCs (10%). As to the sex difference, more males worked for private establishments and for private households while more females were self-employed or worked for government.

Regarding the nature of employment of the workers (see **Table 3.3**), seven in 10 workers were permanent employees, with permanent employment defined as employment for pay or profit, or working as an unpaid family worker being employed with period of employment lasting or expected to last for one year or longer. The remaining respondents were either short-term or seasonal workers (22%) or working for different employers/customers on a daily or weekly basis (7%). More females were permanent workers (75% for females vs. 69% for males) while more males were short-term or seasonal workers (23% for males vs. 20% for females).

Employment Benefits

Among the employed, 18,026 or 74% answered the questions on basic employee benefits of health insurance and social pension coverage (**Table 3.4**). Of this number, 69% reported having health insurance coverage, with the percentage higher among females (73%) than males (66%). Of those with health insurance coverage, almost all were covered by PhilHealth, either as member or dependent. A minority had additional

Figure 3.4 Industry of respondents by sex

Percentage of respondents age 15 and over, by major industry groups and by sex, Philippines 2018
NMS

health insurance coverage with health maintenance organizations (HMOs) or other forms of private health insurance.

As to social security coverage, only 47% of the currently employed who answered the question on benefits said that they are paying into a social security and pension plan; For 9 in 10 of them, this plan is the SSS.

MIGRATION EXPERIENCES OF FILIPINOS

KEY FINDINGS:

Lifetime Migration

- Forty percent of Filipinos are lifetime migrants.
- Fifty-seven percent of lifetime migrants crossed regional boundaries.
- Lifetime migration is dominated by rural-rural flows followed by rural-urban migration flows.
- Three in five internal migrants crossed regional boundaries for their first ever move.

Migration experience of three months or more

- Fifty-five percent of Filipinos ever migrated for three months or more.
- Migrants are distributed by type of migration experience as follows: 88% within the Philippines, 5% abroad, and 7% both within the Philippines and abroad.

Migration in the past five years

- Fifteen percent of Filipinos migrated during the past five years.
- Migrants are distributed by type of migration experience as follows: 84% within the Philippines, 14% abroad, and 2% both within the Philippines and abroad.
- Migration in the last five years is dominated by rural-rural flows followed by urban-urban migration flows.
- The top two net migrant-gaining regions for the past five years are Eastern Visayas and CALABARZON, while the top two migrant-losing regions are NCR and CALABARZON.

Of the three processes that influence the size, composition, and distribution of the Philippine population, migration is the most complex because unlike birth or death - which both occur only once during the lifetime of a person - it is a repeatable event. The timing, decision-making and reason for moving likewise vary at each migration occurrence, further complicating the study of migration and the classification of various forms of migration.

To identify types of migration experiences, the Philippine Statistics Authority (PSA) came up with standard concepts and definitions concerning internal and international migration (refer to PSA Board Resolution No. 08, Series of 2017). The PSA's concepts and definitions were used in the 2018 NMS, with further specification in terms of duration of residence in the destination area. The 2018 NMS collected information on geographic moves involving a change of usual residence for three months or more that entailed crossing of city/municipal boundaries, at the minimum.

This chapter describes the volume and direction of three migration types: lifetime migration, migration in the past five years, and movement to another city/municipality, province, region or country for three months or more. Also discussed are the characteristics of migrants in the past five years by type of their migration experience.

4.1. MIGRATION LEVELS AND FLOWS

Migration. A form of geographic or spatial mobility of people involving a change of usual residence between clearly defined geographic or political units during a specified period of observation for reasons that may be economic, social, political and/or cultural in nature.

Internal Migration. A form of geographic or spatial mobility of people involving a change of usual residence within a country (region, province, city/municipality) during a specified period of observation for economic, social, political and/or cultural reasons.

International Migration. A physical movement of people involving a change of usual residence from one state or territory to another during a specified period of observation for economic, social, political and/or cultural reasons.

Sources: Shryock, Siegel, & Associates, 1980; PSA Board Resolution No. 08, Series of 2017.

Lifetime Migration

Lifetime migration is the “migration that has occurred between birth and the time of the census or survey. A lifetime migrant is one whose current area of residence and area of birth differ, regardless of intervening migrations” (Morrison, Bryan, & Swanson, 2004, p. 493). An apparent limitation of this measure is the masking of migrants who ever resided elsewhere for some period of time but have the same current place of residence as the recorded usual residence of their mother at the time of their birth. In the 2018 NMS, the usual residence of the mother at the time of birth is used as proxy for birthplace and compared with the current residence to be able to determine whether or not an individual is a lifetime migrant. Lifetime migrants cover Filipinos age 15 and over, and excludes non-Filipino citizens, those who were born abroad, and those with no information on mother's residence at the time of birth.

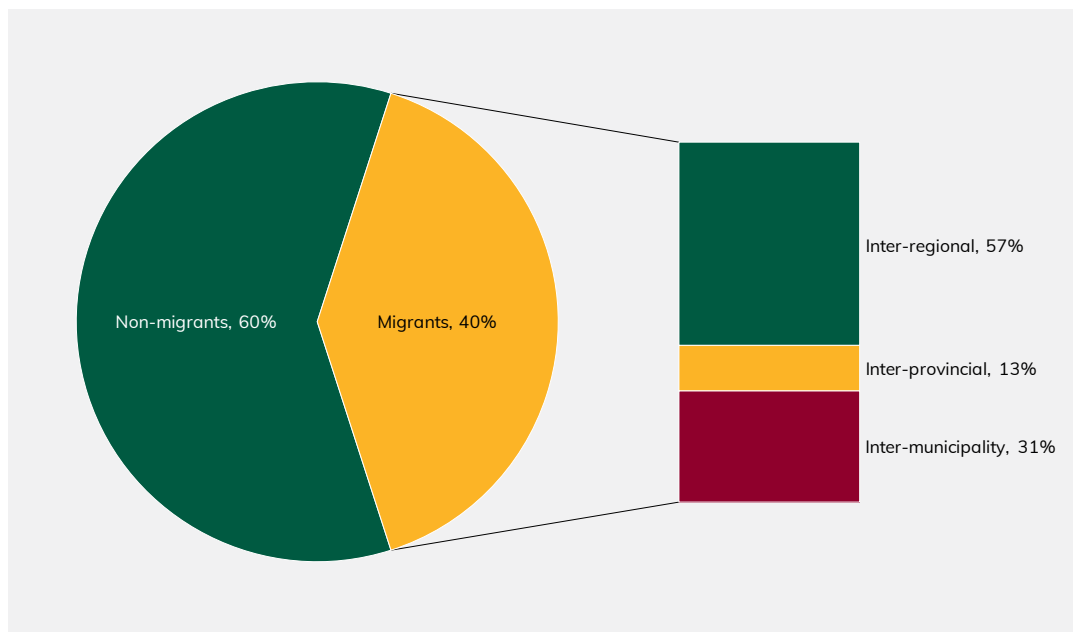

Filipinos are a relatively mobile people. **Table 4.1** shows that 40% of Filipinos are lifetime migrants, with a higher proportion of females (43%) than males (37%). These statistics are consistent with earlier studies on lifetime internal migration in the Philippines, which found that females are more migratory than males (Abad, 1981). The 2018 NMS data reveal that among lifetime migrants, the most prevalent form of migration is crossing regional boundaries (57%), followed by crossing city/municipal boundaries (31%) and crossing provincial boundaries (13%) (**Figure 4.1**). This pattern is true for both male and female lifetime migrants.

Examination of migration flows provides a better understanding of migration dynamics in the country. A migration flow is characterized by its volume (i.e., the number of migrants entering or leaving an area) and its direction (i.e., the origin and destination areas of migrants). Since migration is often economically motivated, migration flows are often associated with the economy of origin and destination regions. A large number of in-migrants in a region may indicate that it is perceived to have a vibrant economy with better opportunities for work, while a region with a large number of out-migrants may indicate the contrary.

The volume of intra- and inter-regional lifetime migrants is shown in **Table 4.2** while the direction of the moves are graphically shown in **Figure 4.2**. The 2018 NMS data reveal that lifetime migration is generally within regions than across regions.

Figure 4.1 Lifetime migration experience

Percent distribution of population age 15 and over by intra- and inter-migration experience (lifetime), Philippines 2018 NMS

The largest migration flows within regions (intra-regional flows), each involving at least 2 million lifetime migrants, occurred in Western Visayas, Central Visayas, CALABARZON, and Bicol.

Meanwhile, the total number of moves from a common origin and a common destination is referred to as a migration stream. Results of the 2018 NMS show that the largest inter-regional migration stream is from NCR to CALABARZON involving 1.2 million lifetime migrants. The next larger lifetime migration streams that crossed regional boundaries are from Bicol to NCR (699 thousand), Bicol to CALABARZON (686 thousand), Western Visayas to NCR (541 thousand), Eastern Visayas to NCR (489 thousand), and CALABARZON to NCR (479 thousand) (Figure 4.2).

Table 4.2 further shows that the regions with the largest number of lifetime in-migrants are NCR, CALABARZON, Central Luzon, Davao, and Central Visayas. These regions are the top contributors to the country's growth as they each accounted for large shares in the aggregate GDP during the period 2016-2018 (BSP, 2019). On the other hand, the regions with the largest number of lifetime out-migrants are NCR, Bicol, Western Visayas, Eastern Visayas, and Central Visayas. Historically, these

Figure 4.2 Inter-regional lifetime migration streams (in millions)

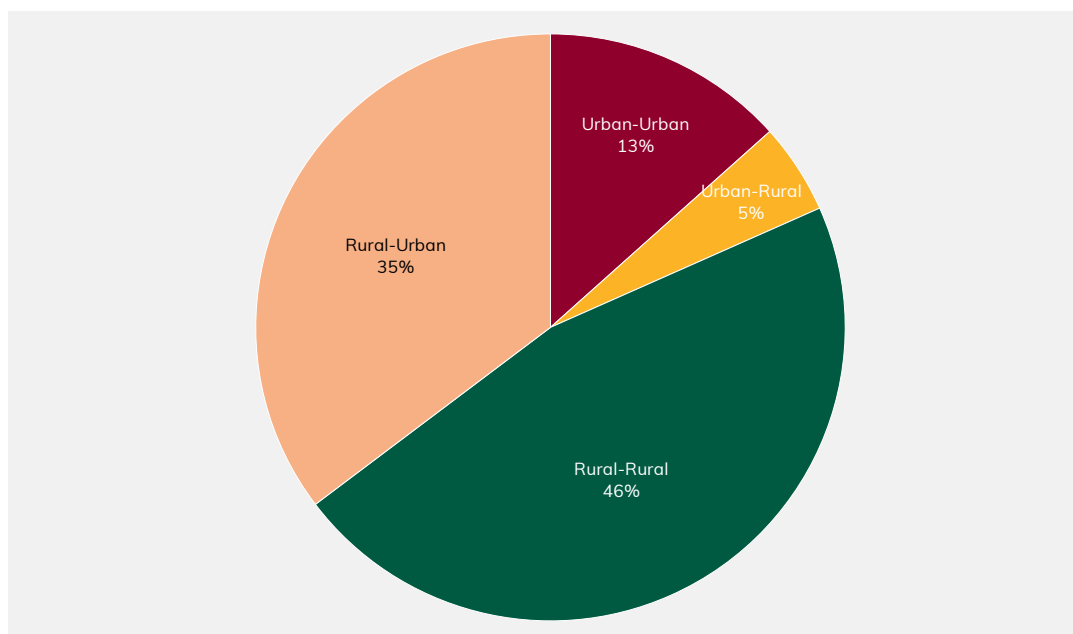

regions have large volume of out-migrants (Concepcion & Smith, 1977; Flieger, 1977; Abad, 1981; Bernardo, 1982; Chan, 1987; Go et al., 2001).

Migration flows bring about population redistribution as some regions lose and in turn other regions gain residents. In terms of the net number of lifetime migrants (i.e., in-migrants minus out-migrants), the top two gaining regions are CALABARZON and NCR, while the top three losing regions are Bicol, Western Visayas, and Eastern Visayas.

The uneven distribution of the Philippine population and economic opportunities also gives rise to urban-rural disparities as these areas offer different types of work and non-work related opportunities. The 2018 NMS findings show that the rural-rural flow dominates (49%), followed by the rural-urban migration flow (Table 4.3 and Figure 4.3). Slightly more female than male lifetime migrants are found to be involved in the former while slightly more female than male lifetime migrants were involved in the latter type of migration flows. These results appear to correspond with early internal migration flows in the Philippines characterized as having migrants from rural origin that were male dominated and land-seeking which shifted over time to migrants with high socio-economic status and urban background and eventually to female-dominated urbanward migration (Concepcion and Smith, 1977; Flieger, 1977; Abad, 1981; Bernardo, 1982; Chan, 1987).

Figure 4.3 Lifetime migration flows

Percent distribution of lifetime migration flows

Migration Experience of Three Months or More

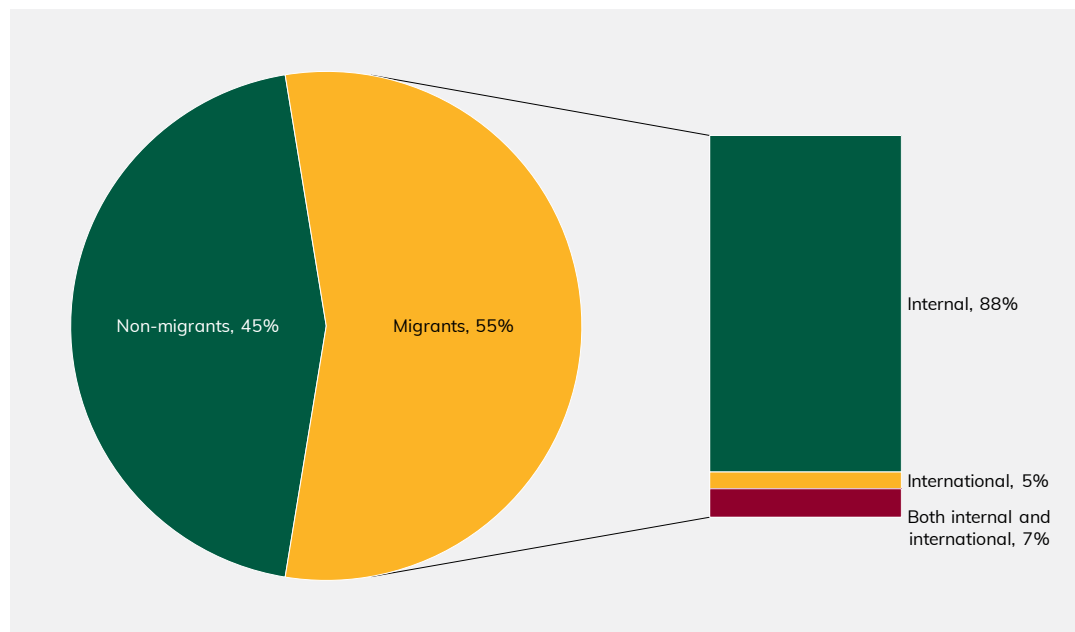

A more refined measure of migration during a person's lifetime is introduced in the 2018 NMS to address the limitation in the conceptualization of lifetime migration as discussed earlier. An individual is considered to have ever migrated if he/she has ever experienced a residential move, with at least three months duration of residence in the destination. The minimum border crossed is city/municipality. This measure, which is used for the remainder of this report, classifies individuals according to their type of migration experience, viz., (1) within the Philippines (Internal), (2) abroad (International), (3) both within the Philippines and abroad (Both), and (4) did not move (Non-migrant).

Table 4.4 shows the type of migration experience of Filipinos based on the more refined concept of ever migrated since birth. In general, 55% of Filipinos moved to or lived in another area, whether in the Philippines or abroad, for at least three months. The 15 percentage points higher estimate of persons who ever migrated for three months or more, when compared with the proportion of lifetime migrants, is expected as this difference estimates the “migrants who moved away from and subsequently returned to their areas of birth” (UN Manual VI, 1970, p. 2).

As shown in **Figure 4.4**, among those who ever migrated, 88% have experienced internal migration only, 5% have international migration experience only, and 7% have experienced both internal and international migration. There is no sex differential in the distribution of migrants by type of migration experience.

Figure 4.4 Migration experience of three months or more

Percent distribution of population age 15 and over by migration experience (ever moved), Philippines 2018 NMS

For migrants, the social and economic costs for the first migration from the birthplace is important because migration entails moving out of a comfort zone to another place about which one often has imperfect information. **Table 4.5** and **Figure 4.5** show that nearly three in five who ever migrated for the first time crossed regional boundaries. The largest migration streams involving more than a million inter-regional migrants are: (1) Bicol to NCR, (2) Eastern Visayas to NCR, (3) Western Visayas to NCR, and (4) NCR to CALABARZON. For first-time migrants who crossed regional boundaries, the top four origin regions, involving at least two million out-migrants each, are Bicol, Eastern Visayas, NCR, and Western Visayas. NCR, CALABARZON, Central Luzon, Central Visayas, and Davao are the top five destination regions, with each receiving at least one million in-migrants.

Table 4.5 further shows that first-time intra-regional migrants involving more than a million each are mostly within Central Visayas, CALABARZON, Western Visayas, NCR, Central Luzon, Northern Mindanao, and Davao. Among those who migrated abroad for the first time, the top destination countries are Saudi Arabia (23%), United Arab Emirates (12%), Malaysia (8%), Japan (7%), Singapore, Taiwan and Kuwait (6% each), Hong Kong and the USA (5% each).

Figure 4.5 Inter-regional migration streams for first ever move (in millions)

Migration in the Last Five Years

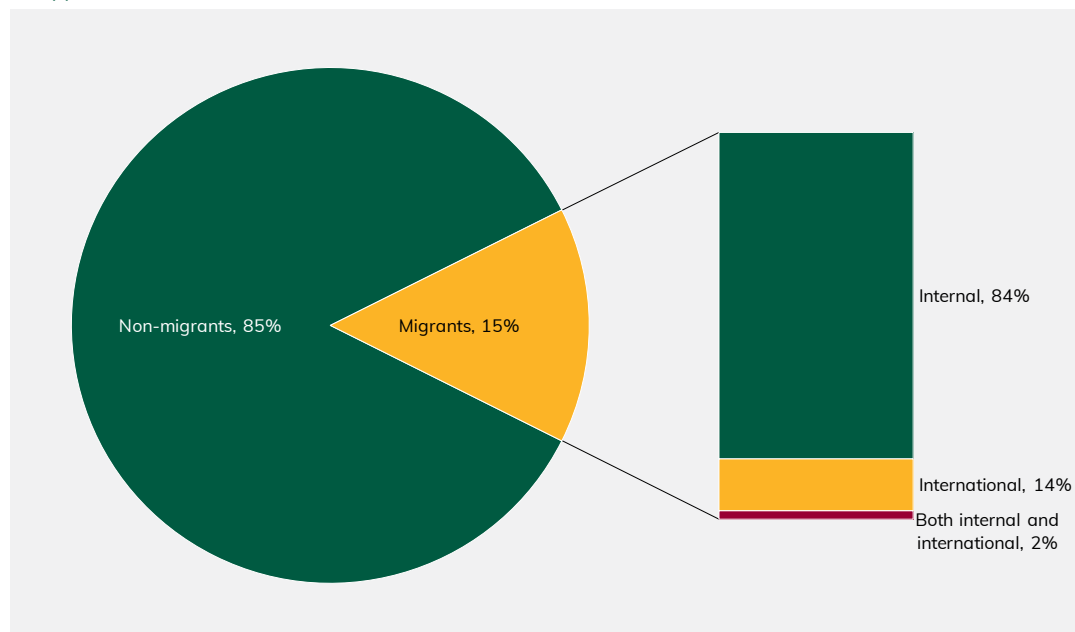

More relevant for policy discussions are recent data on migration. The 2018 NMS collected information on the city/municipality, province, region or country of residence of each respondent as of 1 January 2013. A migrant is identified if the residence in 2013 of a respondent is different from the current residence at the time of the survey. Similar to the measurement of lifetime migration, this measure excludes non-Filipino citizens, those who were born abroad, and those with no information on mother's residence at time of birth. Moreover, all residential changes of three months or more are recorded in the five-year migration history record of each respondent, but analysis of which is not covered in this report.

Findings reveal (see **Table 4.6** and **Figure 4.6**) that 15% of Filipinos migrated during the past five years, of whom 84% have internal migration experience only, 14% have international migration experience only, and 2% have both internal and international migration experience. Among internal migrants, 67% moved within the region while 33% crossed regional boundaries. The seven largest intra-regional migration flows during the past five years, involving at least 250 thousand persons each, occurred in CALABARZON, Central Visayas, Bicol, Western Visayas, NCR, Davao, and Eastern Visayas (**Table 4.7** and **Figure 4.7**).

For internal migration that involved crossing regional boundaries, the five regions with the largest number of out-migrants are NCR, CALABARZON, Central Luzon, Bicol, and

Figure 4.6 Migration experience in the past five years

Percent distribution of population age 15 and over, by migration experience in the past 5 years and by sex, Philippines 2018 NMS

Northern Mindanao while the regions with the largest number of in-migrants are NCR, CALABARZON, Eastern Visayas, Bicol, and Davao.

Based on net inter-regional migration rates computed as the difference between in-migrants and out-migrants divided by the average of the region's population five years ago and the population at the time of the survey (Morrison et al., 2004, p. 501), the top two net migrant-gaining regions for the the past five years are Eastern Visayas and Davao while the top two migrant-losing regions are NCR and CALABARZON (Figures 4.8 to 4.10).

Meanwhile, determining the turnover of population across urban and rural areas is important because it indicates social and economic dynamism. The PSA's 2003 definition of urban areas measured at the barangay level is used in the classification of origin and destination areas for moves during the past five years. Table 4.8 shows that the rural-rural flow dominates (48%) followed by the urban-urban migration flow (46%). There is no apparent sex differential in the distribution of internal migrants by type of migration flow.

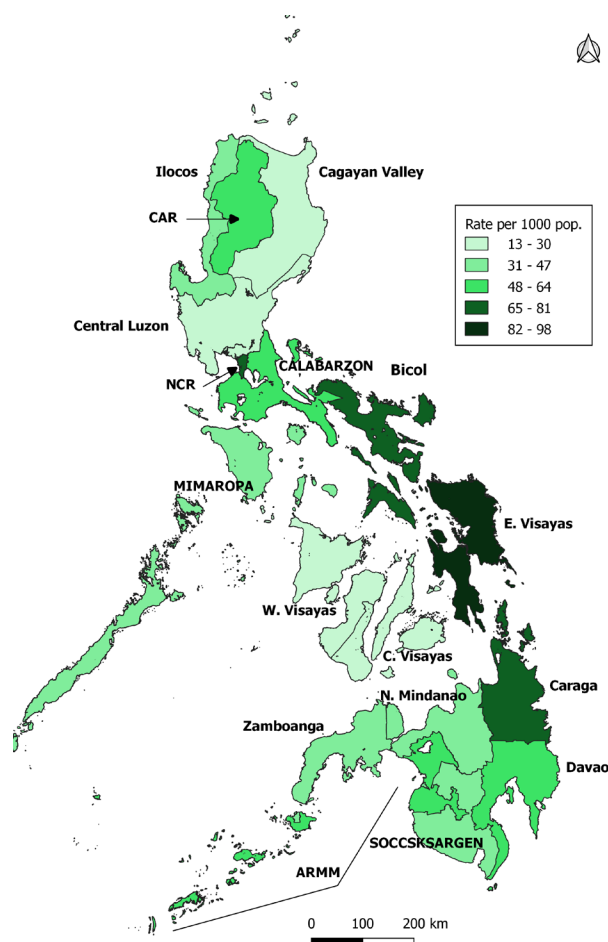

Figure 4.7 Inter-regional period migration streams (in hundred thousands)

Among those who migrated abroad in the past five years, the top destination countries are Saudia Arabia (20%) and United Arab Emirates (15 %) followed by Japan (9%), Kuwait and Qatar (7% each), Malaysia (6%), the USA and Taiwan (5% each).

Observed migration patterns appear to be associated with the uneven regional economic performance. For the period 2010 to 2018, the BSP (2019) reported positive economic performance of all regions. In 2018, 12 in 17 regions recorded economic expansion higher than the national GDP of 6.2% in 2018, with three regions posting growth rates above 8% (Bicol, MIMAROPA, and Davao) and three regions posting growth rates below 5% (Caraga, Cagayan Valley, and NCR). In terms of share to GDP, NCR remained the top contributor (36%) followed by CALABARZON (17%), Central Luzon (9.8%), and Central Visayas (6.5%).

Figure 4.8 In-migration rate in the past 5 years by region (in thousands)

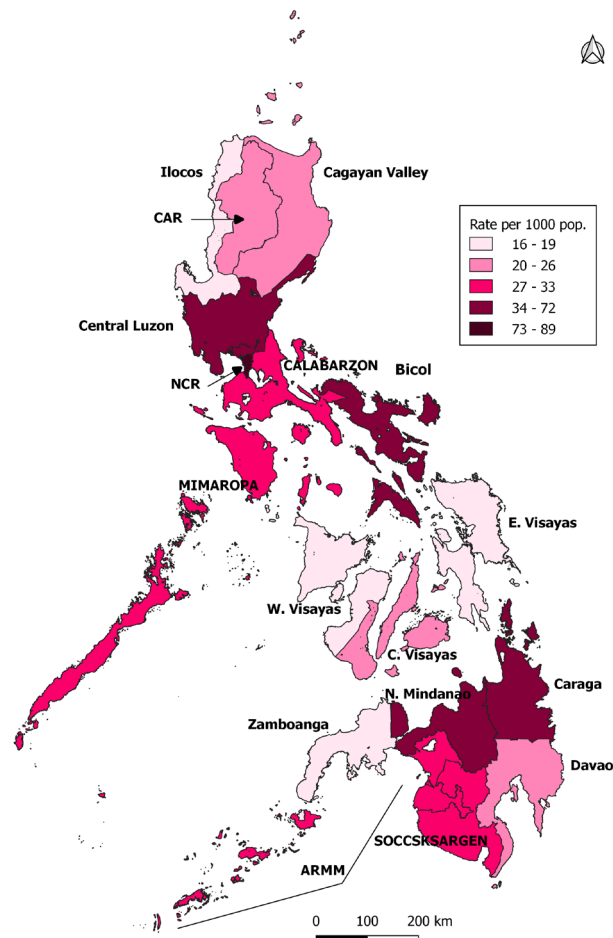

4.2 CHARACTERISTICS OF MIGRANTS AND NON-MIGRANTS IN THE PAST FIVE YEARS

The composition of the population involved in geographic movements provides supplementary data on volume and direction of migration flows. This section describes the socio-economic and demographic characteristics of Filipinos 15 years old and over by type of migration experience within the past five years (Table 4.9).

With Internal Migration Experience Only

Among Filipinos with internal migration experience only, there are more females than males (52% vs. 48%). The highest number of internal migrants is in the age group 20-29 years (44%), followed by the 30-39 years age group (22%). Internal migrants below 20 years old account for 14%. The biggest number of internal migrants are never married (39%), followed by those who are married (31%) and common-law/live in

Figure 4.9 Out-migration rate in the past 5 years by region (in thousands)

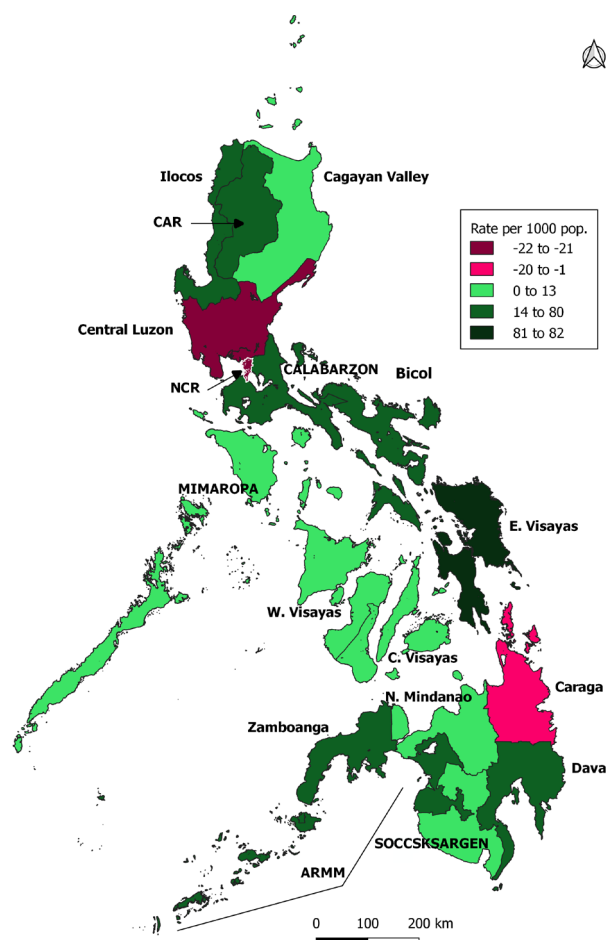

partners (24%). In terms of education, 37% have not attended high school, 35% have completed high school, and 28% have at least some college education. About half of the internal migrants are employed and they live mostly in rural areas (58%). The top three regions with the highest percentage of internal migrants are CALABARZON (13%), NCR (11%), and Bicol (9%). Forty-three percent of internal migrants are in households belonging to the two lowest wealth quintiles; 19%, in the middle quintile; and 38%, in the two highest wealth quintiles.

With International Migration Experience Only

Among Filipinos with international migration experience only, there are more females than males (55% vs. 45%). There is a higher proportion of international migrants aged 30-39 years (40%), as compared to those 20-29 (27%) and below age 20 (<1%) years old. Majority of international migrants are in a marital union (50% married and 15% common-law/live in) and only 27% are never married. Eighteen percent of international migrants did not attend high school, 44% have completed high school,

Figure 4.10 Net migration rate in the past 5 years by region (in thousands)

and 38% have at least some college education. There are more international migrants who live in urban than rural areas (56% vs. 44%). About two in five international migrants are employed, and about four in five are from households in the middle to highest wealth quintiles. The top three regions with the highest percentage of international migrants are CALABARZON (20%), NCR (14%), and Western Visayas (9%).

With Internal and International Migration Experience

There is a small group of Filipinos with both internal and international migration experience in the past five years. There are more males than females (54% vs. 46%) among those who belong to this group. The 20-29 (47%) and 30-39 (43%) age groups account for a larger number of these migrants than the other age groups. Among migrants in this group, the biggest number are never married (34%), followed by the common-law/live in partners (30%) and married (28%) individuals. A big majority of migrants with both internal and international migration experience have completed at least some college education (65%) and majority (57%) of this group of migrants are currently employed. Urban residents are more common than rural residents (57% vs. 43%). The top three regions where these migrants reside are CALABARZON (21%), SOCCSKSARGEN (13%), and Bicol (10%). Nearly half of migrants with both internal and international migration experience belong to households in the highest wealth quintile, while 40% belong to households in the middle or fourth highest wealth quintile.

No Migration Experience

The majority of Filipinos are non-migrants. In this group, females outnumber the males (53% vs. 47%). The highest percentage of non-migrants are in the oldest age groups 50 years and above (37%), followed by those 40-49 years old (22%); only 5% are below age 20 years. Forty-three percent of non-migrants did not finish high school education and nearly three in five are employed. The biggest percentage of non-migrants are in a marital union (married, 56% and common-law/live, 12%); only 22% are never married. Forty-nine percent of members of this group live in urban areas and 51% reside in rural areas. About three in 10 non-migrants reside in NCR and CALABARZON regions. This group is nearly equally distributed across the five wealth quintile categories.

Overall, there are more male than female migrants and non-migrants. The only exception are Filipinos who experienced both internal and international migration, among whom there are more females. Internal migrants are relatively young and never married, while non-migrants are relatively older and are in a marital union. Those with international migration experience are more in prime working ages (20-49 years) and in a marital union. Non-migrants and internal migrants have lower educational attainment than international migrants. Education selectivity in the migration process is further underscored with the highest educational attainment reported by those with both internal and international migration experience.

PRE-MIGRATION SITUATIONS AND MOTIVES

KEY FINDINGS:

- **Reasons and decision-makers for moving abroad:** Employment is the main driver of international migration, mentioned by 89% of migrants as the reason for the first-ever international move and by 83%, for their last international move in the past five years. A great majority decided by themselves their first-ever (73%) and most recent (74%) international migration.
- **Children and family during the international moves:** Among migrants with children left behind, 51% left their children in the care of their spouse or partner and 30%, with their parents. More males leave their children with their spouse or partner while more females leave their children with their parents.
- **Financing of the international moves:** Family is the top source of funding for the first-ever (40%) and last international move in the past five years (41%) followed by personal savings (25% for the first-ever move and 32% for the last international move in the past five years).
- **Types of visa:** For their last move in the past five years, 68% of the migrants had a working visa or permit, 20% had a tourist visa, 4% had seafarer's visa, 2% had immigrant visa, 1% had student visa, and the rest had other types of visa or permits (e.g., fiancé visa, residence permit) or did not need one.
- **Financial situation prior to the international moves:** Before their last international move in the past five years, more than a third (36%) of the migrants belonged to a household that had difficulty meeting its basic needs.
- **Reasons and decision-makers for moving within the Philippines:** Internal migration is mainly driven by employment, the reason cited by 46% of the migrants for their first-ever internal move, and by 23%, for their last internal move in the past five years.
- **Children and family during the move within the Philippines:** Children left behind during the last internal move are taken care of by spouses or partners (45%) and parents (20%).
- **Financing the internal move:** The funds used to move to the current residence in the past five years is mainly from personal savings (55%) and the family (40%).
- **Financial situation prior to the internal move:** Prior to moving to the current residence in the past five years, more than one-third of internal migrants (35%) were from a household that had difficulty meeting its basic needs.

Migration either within a country or across countries is affected by many factors. The factors that compel people to leave a city or municipality are called push factors while the factors that attract people to a particular place are pull factors. The 2018 NMS collected information on the pre-migration situations and motives of Filipinos to be able to understand not only the factors that push them to migrate but also how they execute their migration plans.

This chapter presents information on the situations and motives of Filipinos before their first international move, as well as prior to their last international move in the past five years. These information include their reasons for moving, persons who decided the move, their children and families, modes of financing the move, type of visa used for the move, and their household's economic situation before the move. The same set of information, except for type of visa, are also presented for internal migrants.

5.1 PRE-MIGRATION SITUATIONS OF INTERNATIONAL MIGRANTS

Six percent of Filipinos age 15 and over at the time of the survey have experienced living in another country for at least three months. Nineteen percent of Filipinos have a recent international migration experience, that is living or residing in another country for at least three months in the past five years (**Table 5.1**).

Patterns by background characteristics

- Slightly more females than males ever experienced residing in another country for three months or more (7% vs. 6%). The most recent international migration experience in the past five years does not vary by sex.
- The percentage of Filipinos who ever had an international migration experience is higher in the older age groups (30-39 years and older) than in the younger age groups. However, a higher proportion of the younger age groups (20-29 and 30-39 years old, at 60% and 27% respectively), compared to the older age groups, have experienced international migration in the past five years.
- Filipinos who got divorced, separated, or their marriage annulled registered the highest international migration experience, 14% for the first-ever international move and 21% for the most recent move, among all groups classified according to marital status.
- The percentage of Filipinos with international migration experience increases as education level increases. For the first-ever international move, the percentage increases from 3% of those with less than high school education to 11% of those with college education or higher. When it comes to international migration in the past five years, the percentage increases from 18% of those with less than high school education to 19% of those with college education or higher.
- By region, the percentage of Filipinos with an international migration experience ranges from 3% in Caraga to more than 10% in ARMM (12%), Cagayan Valley (11%), and Ilocos Region (11%). The percentage ranges from 12% in ARMM to 33%

in Northern Mindanao for the most recent international migration experience in the past five years.

Reasons and decision-makers for moving abroad

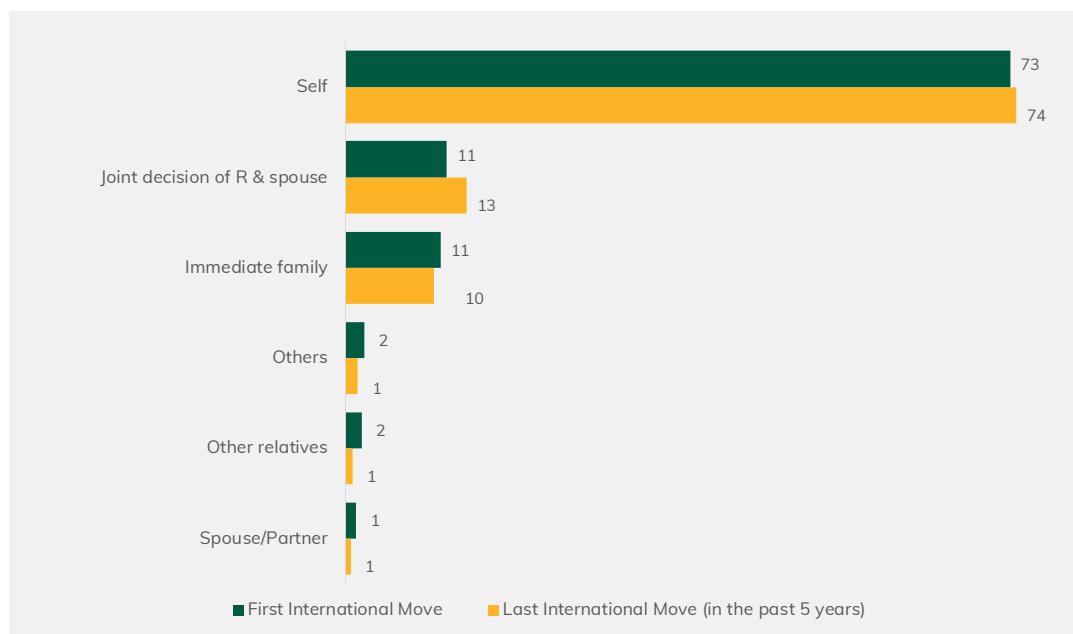

Table 5.2 shows that employment is the main driver of international migration. This is the reason cited by 89% of migrants for their first-ever international move, and by 83%, for their last international move in the past five years. This is true for both sexes, but moreso among males.

Only a few migrants mentioned that their main reason for their first-ever international move was to attend school (1%), to live with their children (2%), or to live with their parents (1%). Meanwhile, 5% of migrants said that the main reason for their most recent international move in the past five years is to live with their children.

Close to three in four Filipinos decided their first-ever (73%) and most recent (74%) international migration experience by themselves (**Figure 5.1**). This personal decision does not vary between males and females. Eleven percent reported that their first-ever international move was a joint decision between them and their spouse, or a decision by their immediate family (11%). As for the decision-makers for their last international move in the past five years, 13% of migrants said that it is a joint decision between them and their spouses, and 10% said it is a decision by their immediate family.

Figure 5.1 Decision-maker for international moves

Percent distribution of international migrants age 15 and over by decision-maker for the first ever international move and last move in the past five years

Children and family during the international moves

In the 2018 NMS, respondents were asked for the number of children living with them prior to any migration experience and if these children or any family members were left behind.

At the time of their first international migration experience, 37% of migrants did not have children and 21% had children but not living with them in the same household (**Table 5.3**). More than two in every five of them had children living with them (42%), which is, on average, two children. In terms of the children's age groups, results revealed that on average, there is one child age below one year or 1-4 years who was living with the respondents at the time of their first international migration. About two children in the older age groups (5-12 years, 13-17 years, and 18 years and above) were with the respondents when they went on their first migration abroad. About the same average number of children in these different age groups were left behind during the migrants' first-ever international move.

When asked who took care of these children left behind, 63% of migrants mentioned their spouses or partners as the children's carers, followed by parents (26%) and other relatives (11%). More males reported their spouses as carers of their children left behind (80% vs. 50%) while more females reported parents as carers of their children left behind during their first-ever international migration (37% vs. 11%). Apart from leaving their children behind, nearly three in five (59%) migrants left behind their spouses during their first-ever international migration experience. More males than females left their spouses behind (70% vs. 49%).

At the time of their most recent international migration in the past five years, more than three in 10 migrants did not have children (32%) and less than two-fifths had children, but they were not living with the respondents (17%). More than half of the migrants had children living with them (51%), which is, on average, two children. On average, there is one child age below 18 years, and two children 18 years old or older, who were living with the respondents. About the same average number of children in these different age groups were left behind during the last international move in the past five years.

Patterns regarding carers of children left behind during the most recent international move are similar to the patterns observed for the first-ever international move. Specifically, spouses or partners served as carers (51%), followed by parents (30%), and siblings (12%). Similarly, more males reported their spouses as carers of their children left behind (75% vs. 36%) while more females, during their most recent international migration in the past five years, left the care of their children left behind to their parents (42% vs. 13%). More than half (55%) left behind their spouses during their last international migration experience. More males than females did so (67% vs. 46%).

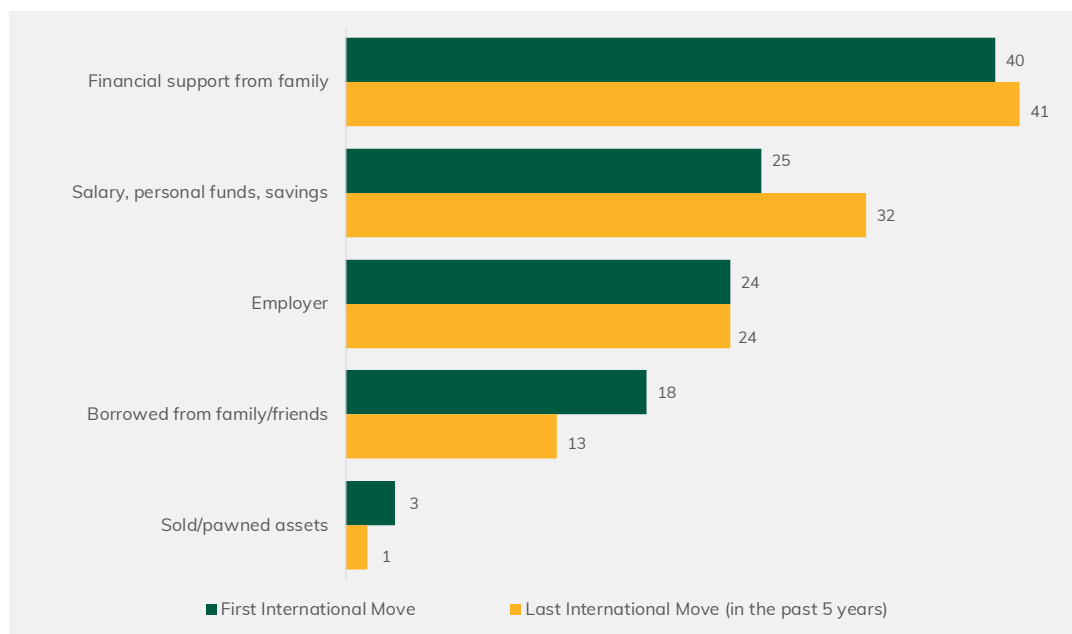

Financing the international moves

Results of the 2018 NMS indicate that the family is the top source of funding for the first-ever international migration of Filipinos (40%), followed by personal savings (25%) (Table 5.4). Employers funded nearly a quarter of the first-ever international migration of Filipinos (24%). Others with no personal savings or financial support from their families resorted to borrowing from friends and relatives (19%). More males than females finance their first-ever international move with their personal savings (29% vs. 22%), while more females depend on their family's financial support (42% vs. 37%). For the other modes of financing for the first-ever international move, there is not much difference between males and females.

The family is also the main source of funding of Filipinos for their most recent international migration experience in the past five years (40%), followed by personal savings (32%) (Figure 5.2). A quarter of the migrants got funding from their employers (25%) while others borrowed from friends and relatives (13%). Similar to the patterns observed in the financing for the first-ever international migration, more males than females tend to finance their last move in the past five years with their personal savings (38% vs. 27%), while more females depend on their family's financial support (44% vs. 38%). The availment of other modes of financing the most recent international move in the past five years also does not vary much between males and females.

Figure 5.2 Top five sources of financing the international moves

Percent distribution of international migrants age 15 and over by financing of the first international move and last international move in the past five years

Types of visa

A great majority of the migrants lived or resided in another country for three months or more with a valid working visa or permit (72%) (**Table 5.5**). The percentage with valid working visa or permit is not different between males and females. More than a tenth had a tourist visa during their first-ever international migration (15%), with more females reporting so compared to males (18% vs. 12%).

In terms of the visa type used during their last international migration in the past five years, a great majority of the migrants used a valid working visa or permit (68%), with slightly more females than males doing so (69% vs. 68%). More than one in five used a tourist visa, with more females than males (23% vs. 15%) doing so in their most recent international migration in the past five years (20%).

Financial situation prior to the international moves

When asked to assess their household's financial sufficiency to meet all basic needs prior to their first-ever international move, 44% of the migrants considered themselves to belong to households that do not have enough finances to cover their basic necessities. Slightly more females than males gave this evaluation of their household (46% vs. 42%) (**Table 5.6**).

The migrants were also asked to assess the financial sufficiency of their household to meet basic expenses before their last international move in the past five years. More than a third (36%) said that their household had difficulty meeting its basic needs. This assessment is higher among females than males (42% vs. 29%).

5.2 INTERNAL MIGRANTS

More than a tenth of Filipinos moved to their current residence within the past five years prior to the survey (13%) (**Table 5.7**).

Patterns by background characteristics

- An equal percentage (13%) of males and females moved to their current residence from another city or municipality within the Philippines in the past five years.
- Internal migration in the past five years decreases with increasing age, from about 30% of those in the age groups 15-19 years and 20-29 years making this move, to less than 5% of those above 50 years old.
- Filipinos who are in a common law/live-in arrangement have the highest internal migration in the past five years (22%), followed by those who are never married (21%).
- The percentage of Filipinos with internal migration experience increases as education level increases, from 11% of those with less than high school education, to 15% of those who have attended college or higher.
- Across employment status, more unemployed Filipinos have moved within the Philippines in the past five years compared to the employed (15% vs. 12%).
- By region, the percentage of Filipinos with internal migration experience ranges

from 4% in Central Luzon to 20% in Bicol, Eastern Visayas (22%), and ARMM (22%).

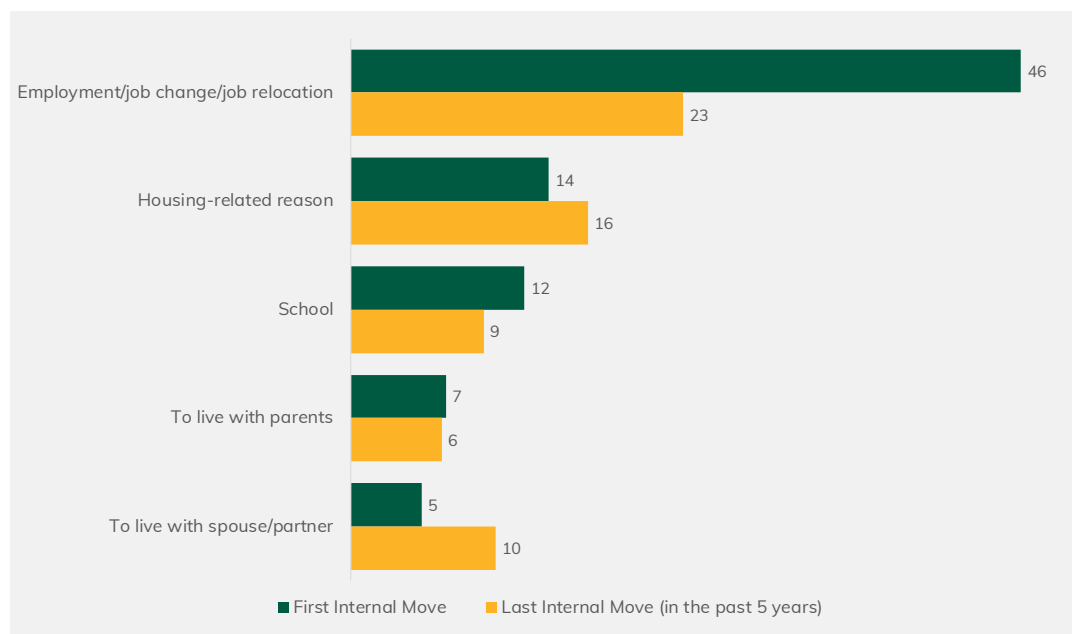

Reasons and decision-makers for moving within the Philippines

As with international migration, internal migration is mainly driven by employment reasons. It was cited by 46% of the respondents as the reason for the first-ever internal move and by 23%, for the last internal move in the past five years (Table 5.8). This is true for both sexes, but more so among males, for both their first-ever and most recent internal move. Other reasons for internal moves are housing-related, schooling, and to live with family members (e.g., parents or spouses) (Figure 5.3). The latter reason, in particular, was mentioned by one-tenth of migrants as the main reason for their last internal move in the past five years, with more females than males reporting so (13% vs. 7%).

The data indicate that the first-ever internal migration experience is a personal decision of Filipinos. Among the respondents, 44% said that they were the ones who made the decision to move to another part of the country, with more males than females (47% vs. 41%) who personally decided on their initial internal migration. Immediate family members decided on the first-ever internal move of 39% of the respondents, while among 12% of the respondents, the move was a joint decision between them and their spouses.

Figure 5.3 Top five main reason for internal moves

Percent distribution of internal migrants age 15 and over by reason for first-ever internal move and last internal move in the past five years

In contrast, the decision-makers for the last internal move in the past five years are primarily the respondents and their spouses (26%), or their immediate family (16%). More females than males reported that their last internal move in the past five years was a joint decision between them and their spouses (30% vs. 21%).

Children and family during the move within the Philippines

Table 5.9 shows that less than half of the respondents did not have children (47%) and one-third had children but were not living with the respondents (33%) at the time the latter moved to their current residence in the past five years. One in five internal migrants had children living with them (20%), which is, on average, two children. On average, there is one child below 18 years old, and two children 18 years old and over, living with the respondents at the time of their last internal migration. About the same average number of children in these different age groups were left behind during the last internal move in the past five years. These children were left in the care of spouses or partners (45%), or the respondents' parents (20%). More males reported their spouses as carers of their left-behind children (61% vs. 36%) while more females chose their parents as the carers of their left-behind children (23% vs. 15%).

Financing the move within the Philippines

The funds used to move to the current residence in the past five years is mainly from personal savings (55%), followed by family (40%) (**Table 5.10**). More males than females financed their last internal move in the past five years with their personal savings (61% vs. 48%) while more females depended on their family's financial support (47% vs. 34%).

Financial situation prior to the internal move

More than one-third of the respondents (35%) rated the households they belonged to, prior to moving to their current residence in the past five years, as unable to cover their basic necessities. Slightly more males than females had this assessment of the household they were in (37% vs. 33%) (**Table 5.11**).

MIGRATION NETWORKS, AND ASSISTANCE AND ENGAGEMENT IN ASSOCIATIONS AND TRAINING

KEY FINDINGS:

- **Migration network:** A big majority (62%) of international migrants do not have relatives or friends in their first country of destination. Almost half (43%) of internal migrants do not have relatives or friends in their place of destination at the time of the move.
- **Assistance received from network:** Among those who have relatives or friends in their destination, the main forms of assistance received were food and/or lodging (43% among international migrants, 49% among internal migrants).
- **Engagement in associations abroad:** Very few international migrants have joined a migrant association (3%).
- **Training abroad:** Fourteen percent of international migrants have attended training or studied abroad, majority of whom said they attended work-related training.

The decision to migrate to a particular place is to some extent influenced by social connections in the place of destination. Social support is important in the adjustment and integration of the migrant in the new place and this is particularly salient for the first migration experience. Membership in migrant associations may also play a role in the success of the migration.

This chapter focuses on the migrants, both international and internal, and their networks in the (a) international migrant's first place of destination and (b) internal migrant's current residence at the time of their move. The migrants' networks may include relatives and friends, as well as migrant organizations or institutions with particular programs on assisting or providing support to the migrants.

6.1 MIGRATION NETWORK

Migration network. Indicators related to migration networks are based on several questions inquiring about persons who moved with the migrant, persons who joined the migrant after a year, and whether the migrant has relatives or friends living in the place of destination abroad or within the Philippines.

Sample: Migrants age 15 and over

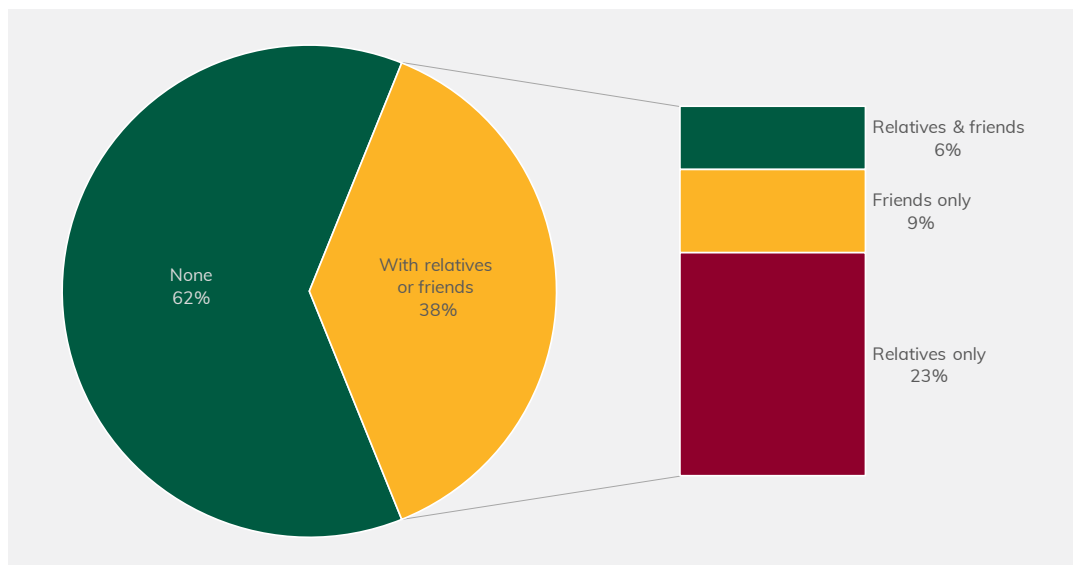

Migration network of international migrants in their first country of destination

First-time international migrants generally had no one with them when they moved to another country (76%), and very few had their family or relatives join them within a year of their move (10%, **Table 6.1**). While relatives were most often the companion of the migrants, close friends were also mentioned by more than 5% of the migrants as their companion when they first moved to another country. Siblings were the ones who mostly joined the international migrants within a year of arrival in their first country of destination.

When asked whether they have relatives and/or friends in their first country of destination, a great majority (62%) of the international migrants said that they had none (**Table 6.2**). Stately conversely, at the time of their first move abroad, 38% of the international migrants had relatives or friends in their country of destination (**Figure 6.1**).

Figure 6.1 International migrant's network in first destination country

Percent distribution of international migrants age 15 and over by presence of relatives or friends in first destination country

Patterns by background characteristics

- More males (67%) than females (59%) did not have relatives or friends in their first country of destination (**Table 6.2**).
- International migrants aged less than 50 years mostly did not have relatives or friends in their first country of destination. In contrast, most of older migrants (those in their 50s or older) reported having relatives or friends in their destination countries.
- Migrants who are married, either formally or not, mostly did not have relatives or friends in their first destination country (66% and 73%, respectively). Compared to married migrants, those never married and formerly married (widowed and divorced/separated/annulled) had a higher percentage with relatives or friends in the destination country.
- A big majority of migrants with higher education (68% for high school graduates and 62% for those with college education or higher) reported not having relatives or friends in their destination countries; the corresponding percentage for migrants with lower education was lower (54%, **Table 6.2**).
- More international migrants from the regions of ARMM, MIMAROPA, and the Cordillera Administrative Region, as compared to other regions, had relatives and/or friends in their first country of destination (**Figure 6.2**). Eastern Visayas had the highest percentage (84%) of international migrants who reported having no relatives or friends in the first country they moved to.

Among migrants who had friends or relatives in their first country of destination, the primary form of assistance received was food and lodging (43%, **Table 6.3**). The migrants also received assistance in finding work (20%) or referrals for work (11%). Some migrants also received support in terms of either transportation (23%) or loan (20%). About 16% reported receiving help in obtaining visa or residence permit. A few reported they were provided full support until they found work (7%). In general, a slightly higher percentage of females received assistance from their relatives or friends than males. Some international migrants (29%) reported, however, that they did not receive any form of assistance from their relatives or friends in their first country of destination.

The migrants reported minimal support from the Philippine government or other institutions and organizations; as found in **Table 6.4**, only 5% of migrants reported they received assistance from said institutions/organizations, higher among males than females. Among the few who received help, assistance came in the support in obtaining visa or residence permit (31%), food and/or lodging (28%), loan (22%), or transportation (20%). Other forms of assistance received include finding accommodation, work, or referrals for work.

Migration network of internal migrants in their current residence at the time of their move

The pattern for internal migrants is not very different from that for international migrants. The only difference is that fewer internal migrants (48%, **Table 6.5**) than

international migrants (62%, **Table 6.2**) reported not having anyone with them when they migrated to their current residence. More male (53%) than female (44%) internal migrants did not have companions when they moved. Among those who moved with company, about one-fourth each reported having their spouse (27%) and/or children with them (24%).

When asked if, at the time of their move, there were relatives and friends in their current residence, 29% of internal migrants responded that they had relatives only while 26% said they had both relatives and friends. A few reported having friends only (3%). Forty-three percent of internal migrants reported not having relatives or friends in their current residence at the time of their move (**Figure 6.3**).

Patterns by background characteristics

- Among internal migrants, more females (47%) than males (39%) have no relatives or friends in their current residence at the time of migration. In contrast, more

Figure 6.2 International migrant's network in first destination country by region

Percentage of international migrants with relatives or friends in the first destination country

males (31%) than females (21%) reported having both relatives and friends in their current residence (**Table 6.6**).

- Compared with internal migrants who did not complete high school, more internal migrants who are at least high school graduates reported having no relatives and/or friends in their current residence (37% versus 46%).
- By region of origin, internal migrants from the regions of ARMM, Central Luzon, and Davao top the list of regions with the highest percentages of relatives or friends in their current residence when they migrated (**Figure 6.4**).

Among internal migrants who had friends or relatives in their current residence, about half reported they received assistance mostly with food and lodging (**Table 6.7**). A few migrants also received support either in terms of transportation (15%) or in finding accommodation (11%). One-third of the internal migrants, however, reported not receiving any support from their relatives or friends.

Very few migrants received assistance from local government units or organizations at the time they moved to their current residence (**Table 6.8**). Similar to the assistance migrants received from relatives or friends, those who received assistance from local government units or organizations received food and/or lodging, money or loan, or transportation.

Figure 6.3 Internal migrant's network in current residence at time of migration

Percent distribution of internal migrants age 15 and over by presence of relatives or friends in current residence at time of move

6.2 ENGAGEMENT IN ASSOCIATIONS

One way to create social support is to join associations. International migrants were asked if they joined any migrant associations in their destination country. **Table 6.9** shows that very few of the international migrants joined a migrant association (3%). Among those who joined migrants associations, majority said their organization engage in social and cultural activities, including church-related activities (71%). Some mentioned that legal assistance is one of their association’s activities (38%). A few said their association engage in money transfers to the Philippines (11%).

Figure 6.4 Internal migrant’s network in current residence at time of migration by region
 Percentage of internal migrants with relatives or friends in current residence at the time of migration

6.3 TRAINING ABROAD

One of the reasons for international migration is to study or attend training abroad. Of the international migrants age 15 and over, 14% said they attended training or studied abroad, higher among males (18%) than females (11%). Majority of these international migrants said they attended work-related training (**Table 6.10**).

EMPLOYMENT CHARACTERISTICS OF MIGRANTS IN PLACES OF ORIGIN AND DESTINATION

KEY FINDINGS:

- **Employment characteristics before and after moving to the current residence:** Prior to migration, the internal migrants were primarily employed in the wholesale or retail trade industry (20%), other service activities (13%), and manufacturing (13%). Upon their move to their current residence, majority of the internal migrants landed their first job in agriculture, forestry, and fishing (19%).
- **Employment characteristics before and after moving to the first and last country abroad:** Majority of international migrants had better occupational profiles while in the Philippines, as compared to their occupation profile in the first and last countries of destination.
- **Employment of male and female working migrants in the first country abroad:** Male and female international migrants differ in their first job at the first country abroad. Around half of the males worked in the construction (31%) and manufacturing (19%) industries while 67% of females worked in the other service activities industry.
- **Employment pattern of working migrants with different education background in the first country abroad:** There is a considerable percentage (32%) of college-educated international migrants who worked as elementary laborers for their first job at the first country abroad.

This chapter presents the employment characteristics of migrants in places of origin and destination. For internal migrants, this chapter describes their employment characteristics in their previous and current residence. For international migrants, this chapter provides information on their pre-migration work status, as well as their employment characteristics in the first and last countries abroad by background characteristics such as sex, education, and age.

7.1 EMPLOYMENT CHARACTERISTICS OF INTERNAL MIGRANTS IN PREVIOUS AND CURRENT RESIDENCE

In their current residence, 79% of internal migrants were employed. Comparatively, more internal migrants had jobs in their current residence than in their previous residence (47%, **Table 7.1**).

The pre-migration occupation profile of internal migrants who were employed before their move slightly differs from their occupation profile in their current residence. Prior to migration, the internal migrants were mainly workers in elementary occupations (those who work, for example, as cleaners and helpers; agricultural, forestry and fishery laborers; construction, manufacturing, mining and transportation laborers; and food preparation assistants, PSA 2012) (29%), service and sales workers (27%), and craft and trade laborers (11%). In their first job at the current residence, the migrants joined the same occupation groups, but the share of each group slightly differs (**Figure 7.1**). Workers in elementary occupations still made up the biggest percentage (27%), followed by service and sales workers (24%), and skilled agricultural, forestry and fishery workers (11%). Looking at sex differentials, 3 out of 10 of males worked as elementary laborers and 18%, as service and sales workers. The reverse pattern is observed for female workers, among whom 40% worked as service and sales laborers and 20%, as elementary workers.

Prior to migration, the internal migrants were primarily employed in the following industry groups: wholesale or retail trade industry (20%), other service activities (e.g. activities of membership organization, repair of computers and personal household goods, and other personal service activities such as personal services for wellness, except sports activities, laundry services, and funeral and related activities, 13%), and manufacturing (13%). Upon their move to their current residence, majority of the internal migrants landed their first job in agriculture, forestry and fishing (19%), wholesale or retail trade (15%), followed by construction (14%), and accommodation and food service activities (10%). Male and female internal migrants, however, differ in their first job at the current residence. The male migrants worked mainly in the agriculture, forestry, fishing (24%) and construction (20%) industries while female migrants were principally employed in the wholesale and retail trade (22%) and accommodation and food service (18%) industries (**Table 7.2**).

The profile by class of worker is similar before and after migration to the current residence. However, the shares in each class slightly differ. Prior to migration, most of

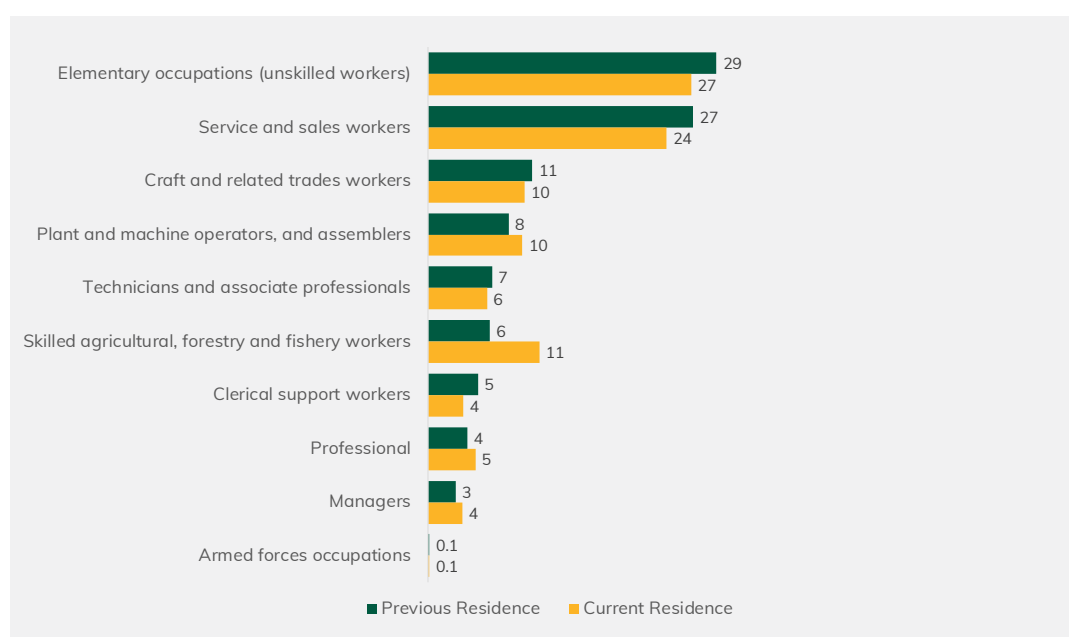

the internal migrants were either employed in private establishments (60%), working for a private household (21%), or self-employed without any employee (12%). For the first job in the current residence, the migrants were still mainly employed in private establishments (48%), private households (22%), or self-employed without any employee (19%). Almost a majority of male (50%) and female (45%) internal migrants worked for private establishments. Moreover, an almost equal percentage of males (22%) and females (21%) worked for private households.

Majority of working internal migrants (57%) had permanent employment in the current residence and only 35% had short-term or seasonal employment (e.g., casual jobs, business, or unpaid family work). The remaining 8% worked for different employers or customers on day-to-day or week-to-week basis. Before moving to the current residence, only 55% had permanent employment, while 41% had short-term or seasonal employment (**Table 7.2**). By sex, more female (60%) than male (56%) internal migrants had permanent employment in their first job in the current residence. However, an almost equal percentage of male (35%) and female (36%) internal migrants were short-term or seasonal workers for their first job at the current residence.

Only 22% of internal migrants were in contact with an employer, recruitment agency or private individual for their first job in their current residence. Likewise, around 22% of male and 21% of female internal migrants had contact with an employer, recruitment agency, or private individual for their first job in their current residence.

Figure 7.1 Occupation before and after migrating to the current residence

Percentage of employed internal migrants age 15 and over by occupation in previous and current residence, Philippines 2018 NMS

Recruitment and First Job Application

For their first job in the current residence, majority (58%) of internal migrants were recruited directly by the employer; 16%, by a private recruitment agency; and 26%, by private individuals (Table 7.3).

For their first job application in the current residence, 55% of internal migrants filed a walk-in application, 29% coursed their application through relatives or friends in the Philippines, while 14% coursed their application through the employer or recruitment agency that initiated contact with them. Majority of male (58%) and female (57%) internal migrants were directly recruited by the employer in the current residence. However, more working male than female internal migrants were recruited by an individual for their first job in the current residence (28% and 22%, respectively).

Benefits provided by Employer

In their first job in the current residence, a substantial percentage of internal migrants did not enjoy employee benefits from their employers. Only around four out of 10 migrants were provided holiday and other bonuses; 32%, paid overtime work; and 27%, compensation for work-related accidents. Less than three out of 10 migrants received health insurance or medical allowance benefits, paid sick leave, maternity or paternity leave, and retirement pension.

Health Insurance Coverage and Social Pension Plans

The biggest number (46%) of internal migrants were Philippine Health Insurance Corporation (Philhealth) paying members during their first job in the current residence. Another 11% were PhilHealth dependents. However, there was also a large share of internal migrants (43%) who did not have health insurance coverage. Philhealth is a government-owned and controlled corporation.

Majority (53%) of internal migrants did not have any social pension or security plan in their first job at the current residence. The remaining 45%, however, had SSS plans while only 2% had GSIS plans.

7.2 PRE-MIGRATION WORK STATUS OF INTERNATIONAL MIGRANTS

Majority (51%) of all international migrants were employed before moving to or residing in their first country abroad. Of those international migrants who moved to more than one country abroad, 45% were employed before moving to or residing in the last country abroad (Table 7.4).

Pre-Migration Work Status. Respondents are asked if they are working before they moved to or resided in another country abroad. Only those who moved to or resided in any country abroad are considered to have pre-migration employment.

Sample: All International Migrants

More than six out of 10 (65%) of male international migrants were working before moving to or residing in their first country abroad. Comparatively, a smaller percentage of female international migrants (40%) were working before moving to their first country abroad. Similarly, more male than female international migrants who moved to more than one country were working before moving to the last country abroad (60% and 33%, respectively) (**Table 7.4**).

The patterns across age groups shows that at the time of migration, fewer migrants in the oldest age group (60 years old and over) were working before moving to the first country abroad, as compared to the other age groups. The percentage working was highest among those in the 40 to 59 age group, followed by those aged 25 to 39 years, and those 15 to 24 years old. A similar pattern can be observed in the employment of international migrants in their last country abroad.

Comparing international migrants with different levels of educational attainment, it will be noted that before moving to their first country abroad, majority of the migrants with high school or college education were working, while only 48% of those with no high school diplomas were working before moving to the first country abroad. A slightly different pattern can be observed as regards the migrants' move to the last country abroad. In all education groups, less than half were working before moving to last country abroad (**Table 7.4**).

7.3 EMPLOYMENT CHARACTERISTICS OF INTERNATIONAL MIGRANTS IN FIRST COUNTRY ABROAD

The percentage of international migrants who worked in their first country abroad is substantially higher than the percentage who worked before migrating to the first country abroad (83% and 51%, respectively) (**Table 7.4**).

Working international migrants experienced a shift in their occupation, industry of work, and worker class before and after moving to the first country. Before leaving the Philippines for the first country abroad, the international migrants were primarily employed as service and sales workers (24%) and elementary laborers (17%), mainly in the manufacturing (17%) and wholesale or retail trade (15%) industries (**Table 7.5**). For their first job in the first country abroad, the biggest number of the migrants (39%) worked in the other service activities industry as elementary laborers (42%, **Figure 7.2**).

Before migrating to their first country abroad, 58% of working international migrants worked at private establishments, 15% were self-employed, 14% worked for private households, and 9% worked for the government and government-controlled corporations. In their first country abroad, only a small percentage of international migrants worked for the government (4%) for their first job. Most of them instead worked for private establishments (59%) and private households (36%) (**Figure 7.3**, **Table 7.5**).

The nature of employment of the working international migrants improved when they moved to the first country abroad. Before moving to the first country abroad, only 68% had permanent employment, while 27% had short-term or seasonal employment (Table 7.5). In their first country abroad, almost three-fourths (73%) of working international migrants had permanent employment and only 26% had short-term or seasonal employment. The remaining one percent worked for different employers or customers on day-to-day or week-to-week basis.

Recruitment and First Job Application

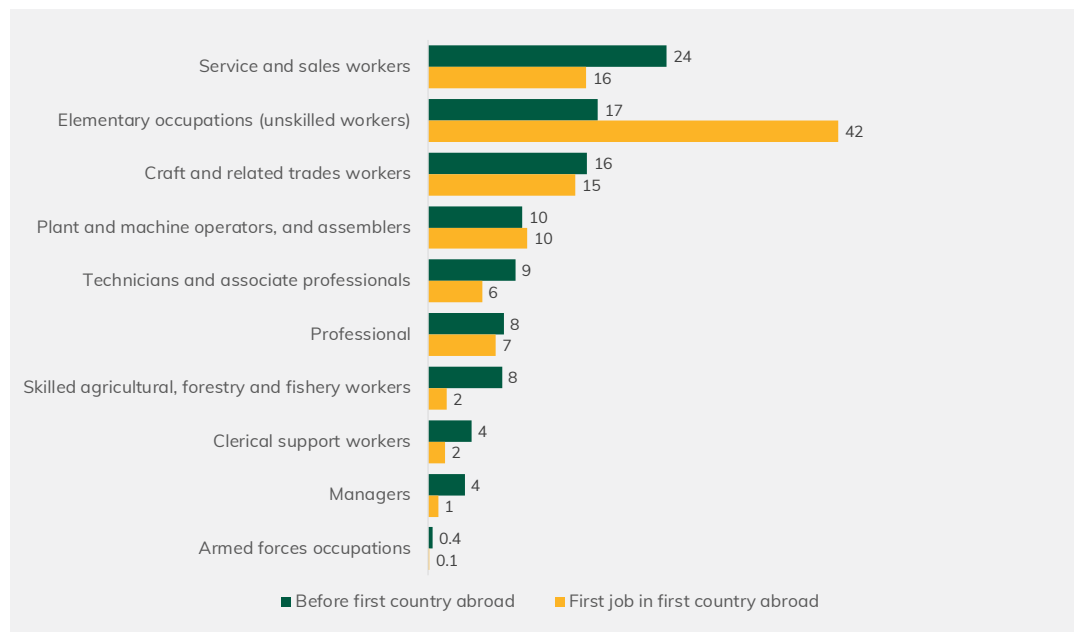

For their first job in the first country abroad, international migrants were most often recruited by a private agency (59%). Around one-third were directly recruited by the employer in the foreign country and only 2% were hired under government-to-government arrangement. In terms of first job applications, the biggest number (45%) applied for their first job by walk-in or face-to-face application while 26% were contacted by employers or recruitment agencies. The rest got employed with the help of relatives and friends (23%) both in the Philippines and abroad (Table 7.6).

Benefits provided by Employers

The main benefits that the working international migrants received from their employers were housing and lodging (76%), rice/food allowance or other consumer goods (70%), and health insurance or medical allowance (53%). However, only a few were granted maternity or paternity leave (15%) and retirement pension (12%) (Table 7.6).

Figure 7.2 Occupation before and after migrating to first country abroad

Percentage of employed international migrants age 15 and over, by occupation before migration and in the first country abroad, Philippines 2018 NMS

Health Insurance Coverage and Social Pension Plans

More than half (53%) of the working international migrants did not have any health insurance coverage during their first job in the first country abroad. The others were either PhilHealth paying members (40%) or Philhealth dependents (6%).

Half (50%) of the migrants did not have any social pension or security plan in their first job in the first country abroad. The other half (49%), in contrast, had SSS plans.

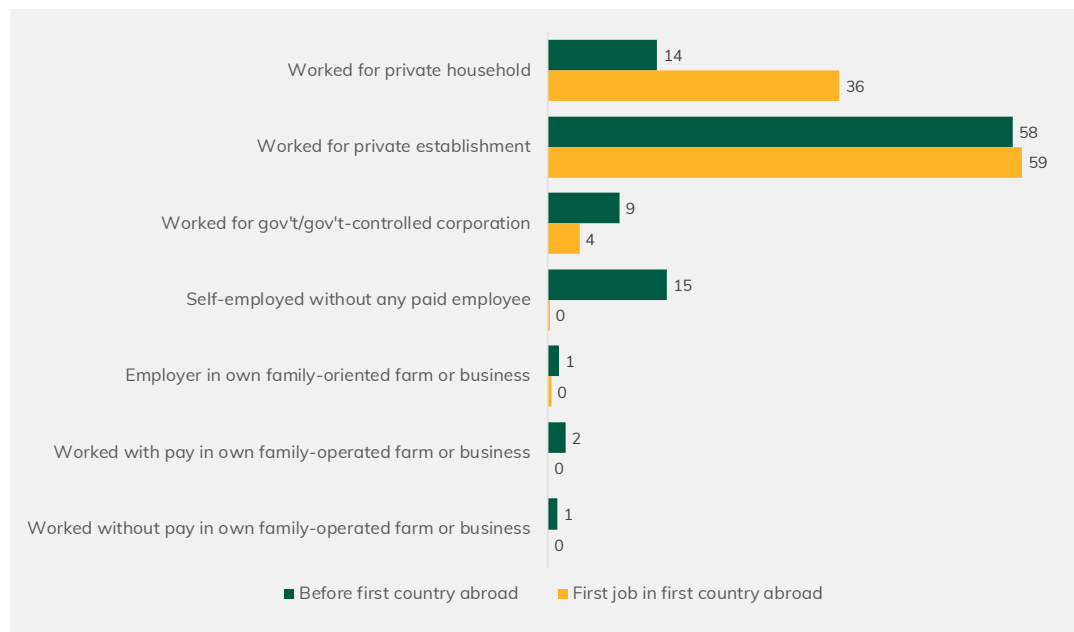

Employment Patterns by background characteristics

By sex

- Male and female international migrants differ in profile with respect to their first job in the first country abroad. The males worked mainly in the construction (31%) and manufacturing (19%) industries while the females were mainly working in the other service activities industry (67%) (Table 7.5). As regards occupation, the male migrants were primarily hired, in the order specified, as craft and related laborers, elementary laborers, and plant and machine operators and assemblers. In contrast, six out of 10 female migrants were hired as elementary laborers (Figure 7.4).
- The difference between males and females is not just found in the industry and occupation classifications of their first job in the first country abroad. It is also evident in the class of worker they belonged to. Specifically, most of males (88%)

Figure 7.3 Class of worker before and after migrating to first country abroad

Percentage of employed international migrants age 15 and over by class of worker before migration and in the first country abroad, Philippines 2018 NMS

worked for private establishments while a big majority of the females (62%) worked for private households.

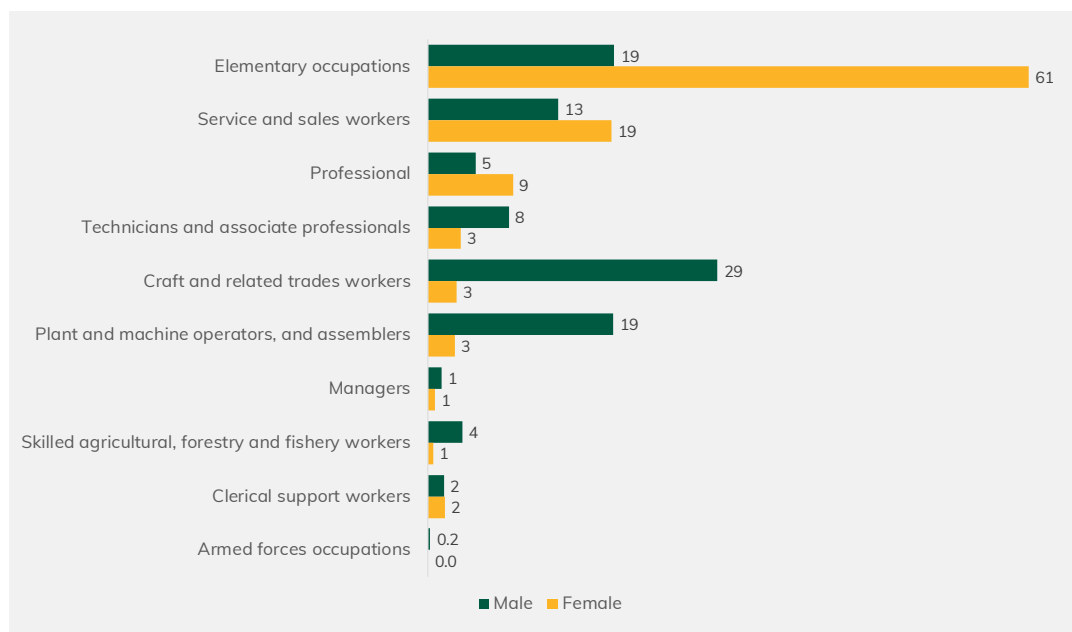

- Another point of difference between male and female migrants is the nature of employment they secured for their first job in the first country abroad. Females were better able than males to secure permanent employment (75% and 71%, respectively). As such, it is not surprising to find that more male (29%) than female (25%) international migrants worked as short-term or seasonal workers for their first job in the first country abroad.
- Finally, male and female international migrants also differ in terms of how they landed their first job in the first country abroad. Employment through a private recruitment agency was more common among female (63%) than male (54%) migrants. On the other hand, direct recruitment by an employer based in the foreign country was more common among male than female migrants (38% for males and 30% for females, **Table 7.6**).

By age at the time of the move

- Comparing the different age groups, it will be noted that (a) there is a huge increase in the percentage working before and after migration to the first country abroad among international migrants less than 40 years old at the time of the move and (b) a noticeable decrease in the percentage employed among those 60 years and older after migrating to the first country abroad (**Table 7.4**).
- The pattern of occupation distribution pre-migration and in the first country

Figure 7.4 Occupation of male and female international migrants in the first country abroad

Percentage of employed international migrants age 15 and over, by occupation and by sex, Philippines 2018 NMS

abroad is almost the same across age groups. Whereas majority of them were distributed across sales and service, craft and related trades, and elementary occupations. Prior to migration, they were primarily employed in elementary occupations in their first job in the first country abroad (**Table 7.7**).

- In all age groups, there was a noticeable shift in the type of industry that the migrants belonged to pre-migration and in their first job in the first country abroad. The shift is the same for all age groups, specifically, from manufacturing and construction before migration to other service activities for the first job in their initial destination country.
- By class of worker, those below 40 years old primarily worked for private establishments before migration and for their first job in the first country abroad. Those aged 40 years or older were mainly either working in a private establishment or were self-employed before they migrated. Upon reaching their first country of destination, however, a big majority (62%) worked for private establishments. But regardless of where they worked and regardless of age, around seven out of 10 international migrants had permanent employment pre-migration and in their first job in the first country abroad.
- A big majority of international migrants less than 40 years old found jobs through a private recruitment agency. In contrast, those older than 40 years were either hired through a private recruitment agency or directly by an employer based in the destination country. In all age groups, the face-to-face approach was the most common means for filing job applications (**Table 7.8**).
- The types of benefits that the different age groups received from their respective employers were more or less the same. Regardless of age group, the top benefits received were housing/lodging and rice/food allowance or other consumer goods, followed by compensation for work-related accidents and paid sick leave. When it comes to health insurance coverage, the different age groups were also similar in profile in that about half of them did not have any such insurance while about four out of 10 were PhilHealth paying members. In terms of social pension plan, **Table 7.8** shows that majority (56%) of those aged 15-24 years did not have any while majority of those 25 years old and older had one. Among those with a social pension plan, SSS coverage was the most common across all age groups.

By educational attainment

- Comparing international migrants with different levels of educational attainment, findings show that there were more college-educated than high school-educated international migrants who landed professional and managerial jobs for their first job in the first country abroad. Still, it is worth noting that a considerable number (32%) of college-educated international migrants worked as elementary laborers for their first job in the first country abroad. Among migrants with less than high school education, majority (58%) ended up with elementary work in their first job in the first country abroad (**Table 7.9**).
- When it comes to industry classification, **Table 7.9** shows that college-educated international migrants primarily entered the other service activities (33%),

manufacturing (15%), accommodation and food service (11%), and transportation and storage (11%) industries for their first job in the first country abroad. On the other hand, a big majority of the high school graduates worked in the other service activities (44%), construction (15%), and manufacturing (14%) industries. Among migrants with less than high school education, most got employed in the other service activities (46%) and construction (25%) industries (**Table 7.9**).

- Further comparisons by educational attainment reveal that employment in private establishments and private households for the first job in the first country abroad was a more common track for college-educated international migrants than non-college-educated migrants. However, regardless of educational attainment, around three-fourths of working international migrants had permanent employment for their first job in the first country abroad.
- Regarding job recruitment and benefits of the first job in the first country abroad, results show that (see **Table 7.10**): (a) those with high school education or higher were mainly hired through a private recruitment agency while those who did not reach high school were either recruited through a private agency or directly by the employer, (b) in all education groups, face-to-face application was the main way of looking for a job, (c) the share of employees enjoying different kinds of benefits, health insurance coverage, and social pension plans increases as educational attainment increases.

7.4 EMPLOYMENT CHARACTERISTICS OF INTERNATIONAL MIGRANTS IN LAST COUNTRY ABROAD

The discussion in this section focuses only on the first job of international migrants in their last country abroad. This is because around 68% of working migrants had the same first and last job in their last country of destination (not shown in the tables). Thus, the employment characteristics of international migrants for the first and last job are very similar to each other.

Pre-Migration Work Status. Respondents were asked if they moved to or resided in a country abroad multiple times. Only respondents who a) resided in a single country abroad but experienced multiple entries and exits for that country; and b) resided in more than one country abroad are considered.

Sample: All international migrants who moved to or resided in other countries more than once

Half (51%) of international migrants were working before their move to the last country abroad. This percentage increased to 79% upon arrival in the last country abroad (**Table 7.4**).

The pre-migration occupation profile of international migrants who were working before their move to the last country abroad differs from their occupation profile

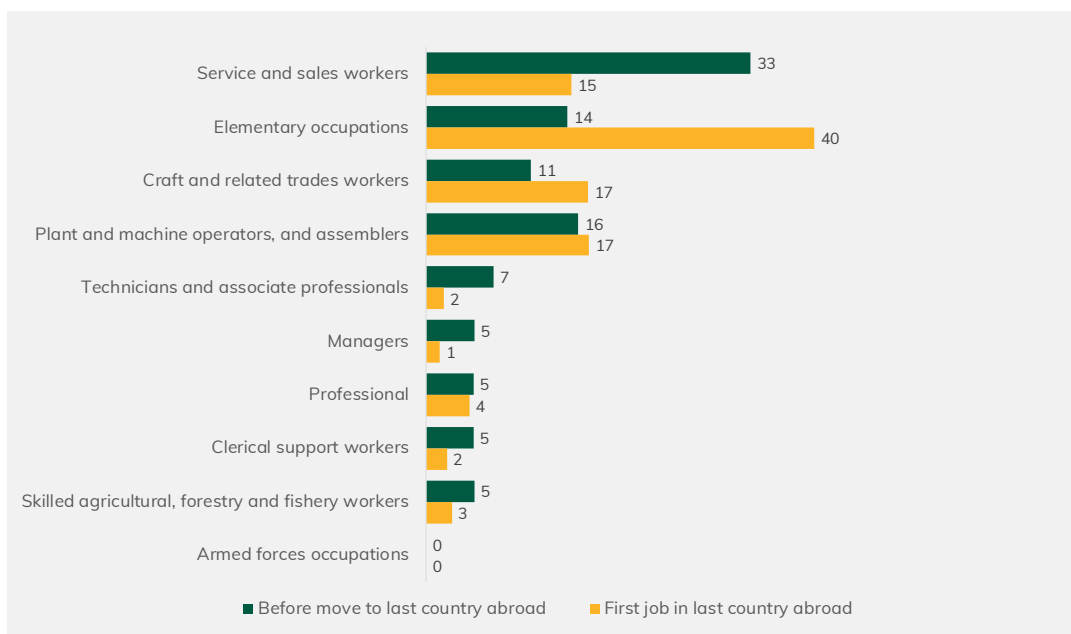

in their last country of destination. Prior to migration to the last country abroad, the international migrants were employed mainly as service and sales workers (33%), plant and machine operators, and assemblers (16%), workers in elementary occupations (14%), and craft and trade laborers (11%). In their first job in the last country abroad, the migrants joined the same occupation groups, but the share of each group differs. Workers in elementary occupations made up the biggest percentage (40%), followed by craft and trade laborers (17%), and plant and machine operators, and assemblers (17%) (Table 7.11, Figure 7.5).

Prior to migration to the last country of destination, the international migrants were primarily employed in the following industry groups: wholesale or retail trade industry (19%), transportation and storage (14%), and accommodation and food service activities (13%). Upon their move to their last country of destination, majority of the international migrants landed their first job in other service activities (41%), followed by transportation and storage (14%), and construction (12%).

The profile by class of worker also differs before and after migration to the last country abroad. Prior to migration, most of the international migrants were either employed in private establishments (54%), self-employed without any paid employee (17%), or working for a private household (13%). For the first job in the last country of destination, the migrants were mainly employed in private establishments (57%), private households (38%), and government or government-controlled corporations (5%, Figure 7.6).

Figure 7.5 Occupation before and after migrating to last country abroad

Percentage of employed international migrants age 15 and over by occupation before and in the last country abroad, Philippines 2018 NMS

Almost 70% of international migrants had permanent employment in their last country abroad, and only 33% had short-term or seasonal employment. Before moving to the last country abroad, 64% had permanent employment, while 27% had short-term or seasonal employment. The remaining 8% worked for different employers or customers on day-to-day or week-to-week basis (**Table 7.11**).

Recruitment and First Job Application

For their first job in the last country abroad, more than six out of 10 of international migrants were recruited by a private recruitment agency, 30% were directly recruited by the employer in the foreign country, and only 2% were recruited through government-to-government arrangement (**Table 7.12**).

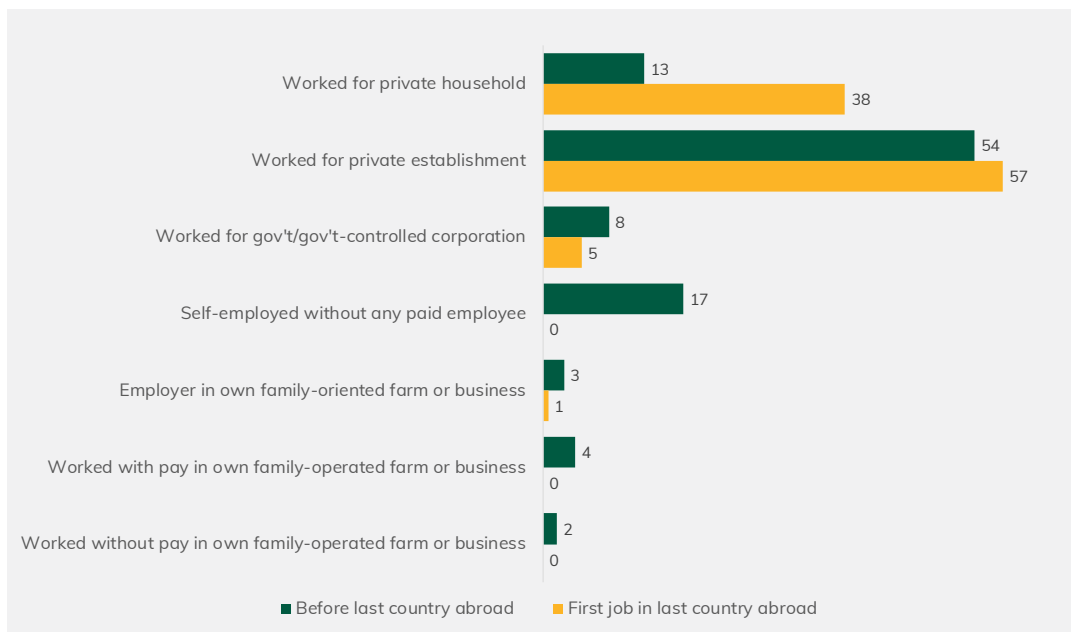

Regarding the manner of applying for their first job application in the last country abroad, the international migrants mainly did so through walk-in application (49%). Other migrants opted to get in touch directly with employers or recruitment agencies (23%), or course their application through relatives and friends in the Philippines (10%) or abroad (9%).

Benefits provided by Employers

The international migrants who were working in their last country of destination generally received benefits from their employers. The principal benefits received were housing and lodging, allowance for food such as rice and other consumer goods, and

Figure 7.6 Class of worker before and after migrating to last country abroad

Percentage of employed international migrants age 15 and over by class of worker before and in the last country abroad, Philippines 2018 NMS

medical allowance or health insurance, which were provided to at least 60% of the working migrants. However, only 23% were extended maternity or paternity leave provisions and only 18% had retirement pension (**Table 7.12**).

Health Insurance Coverage and Social Pension Plans

One-third (33%) of the international migrants did not have any health insurance coverage during their first job in the last country abroad. The rest of the migrants were either PhilHealth paying members (60%) or PhilHealth dependents (6%).

Almost four out of 10 migrants did not have any social pension or security plan in their first job in the last country abroad. Among those with a social pension plan, a big majority (59%) had SSS coverage.

Patterns by background characteristics

By sex

- Just like in the first country abroad, male and female international migrants differ in their first job in the last country abroad. In terms of the occupation groups they belonged to, 35% of males worked as craft and related laborers and 30% were plant and machine operators and assemblers. In contrast, 63% of female migrants worked as elementary laborers and 17% were employed as service and sales workers. When it comes to the industry the workers joined, more than half of the males worked in the transportation and storage (30%) and construction (26%) industries while 73% of females worked in the other service activities industry (**Table 7.11**).
- Male-female differences were also noted in terms of class of worker, with 85% of males working for private establishments as compared to 33% of females in the same category. The female migrants were primarily working for private households (64%).
- More female than male international migrants (71% vs. 62%) had permanent employment for their first job in the last country abroad. On the other hand, more male than female international migrants (38% vs. 29%) were short-term or seasonal workers for their first job in the last country abroad.
- Majority of female (65%) and male (65%) international migrants were recruited by a private recruitment agency for their first job in the last country abroad. There were more working male international migrants directly recruited by the employer in the foreign country (32%), as compared to working female migrants (28%, **Table 7.12**).

By age at the time of the move

- More than 80% of migrants aged 15 to 24 years and 25 to 39 years at the time of migration were employed in the last country abroad. In contrast, only 62% of migrants 40 to 59 years old at the time of move landed a job in the first country abroad. This pattern is similar to what is observed for the first job in the first country abroad (**Table 7.4**)

By educational attainment

- For the first job in the last country abroad, there were more college-educated international migrants who landed professional and managerial jobs (12%) than international migrants who are only high school graduates (4%). Around 59% of international migrants with less than high school education were hired as elementary workers in their first job in the last country abroad. But even among college-educated international migrants, 25% worked as elementary laborers for their first job in the last country abroad (**Table 7.15**).
- More than half of college-educated international migrants found jobs in the other services activities (25%) and transportation and storage (25%) industries for their first job in the last country abroad. On the other hand, majority of the international migrants who are only high school graduates entered the other service activities (56%) and construction (14%) industries. A similar pattern can be observed for working international migrants that have less than high school education, among whom 64% were employed in the other service activities industry (**Table 7.15**).
- College-educated international migrants mostly worked in private establishments (72%) and private households (22%) for their first job in the last country abroad. Comparatively, fewer (43%) international migrants who only finished high school worked in private establishments; the others (52%) worked in private households. A slightly different pattern can be observed for international migrants who have less than high school education: among them, working for private households (61%) was more common than working in private establishments (38%) for their first job in the last country abroad. Regardless of educational attainment, at least two-thirds of working international migrants were employed as permanent employees for their first job in the last country abroad (**Table 7.15**).
- Regarding job recruitment and benefits, results show that (**Table 7.16**): (a) those with high school education or higher were mainly hired through a private recruitment agency while those who did not reach high school were either recruited through a private agency or directly by the employer, (b) in all education groups, face-to-face application was the main way of looking for a job, (c) the share of employees enjoying different kinds of benefits, health insurance coverage, and social pension plans increases as educational attainment increases. These similarities and differences are the same as those observed regarding recruitment and benefit patterns for the international migrants' first job in their first country of destination.

RETURN MIGRATION

KEY FINDINGS:

- **Awareness of and membership in migration networks:** About a quarter (24%) of international migrants were aware of migration networks organized by the government. At the time the survey was conducted, only 2% of migrants were current members of such networks and less than one percent were former members. Awareness of migration networks was highest among migrants from CAR and Eastern Visayas, and lowest in Central Luzon and ARMM.
- **Difficulties experienced upon return:** Half (51%) of the international migrants experienced difficulty since they returned to the country. Finding a job was the most commonly cited difficulty.
- **Support received upon return:** Very few (4%) of the migrants received any government support for their return or upon their return to the country. Welfare, financial and livelihood assistance were the most common types of support received from the government.
- **Financial situation since return:** More than seven in 10 migrants reported that their financial resources after they returned to the country are sufficient (67%) or more than sufficient (5%) to meet their household's basic needs.

This chapter examines the experiences of international migrants upon their return to the Philippines, specifically their engagement in migration networks, the difficulties they experienced, and the support they received from the government and other sources. These information are invaluable inputs in evaluating existing government programs for returning overseas Filipinos and in developing better interventions that will benefit these migrants, their families, and the entire community.

8.1 AWARENESS OF AND MEMBERSHIP IN MIGRATION NETWORKS

The Philippine government has instituted a number of social services, support mechanisms, and migration networks for returning overseas Filipinos, particularly labor migrants. One such network is the Philippine Job Exchange Network (Phil-

Return Migrants. Respondents who have resided continuously in another country for three months or more for tourism, studies, employment or other reasons, and were in the country at the time of the survey either for vacation or for permanent residence

Sample: International migrants age 15 years and over

JobNet), which provides a listing of job vacancies that can be tapped by returning overseas Filipino workers (OFWs) seeking local employment (Public Services International, 2015). There are also the OFW Family Circles (OFCs) that the Overseas Workers Welfare Administration (OWWA) has been organizing nationwide to serve as support system to OFWs and returnees, as well as their families, for their psychosocial needs. Awareness of and membership in such networks can facilitate the smooth reintegration of returning migrants to their family and community, particularly when they have been away for an extended period of time.

Table 8.1 shows the international migrants' level of awareness of and membership in migration networks organized by the government for overseas Filipino returnees. About a quarter (24%) of the migrants were aware of these migration networks. Membership in such networks was very low, with only 2% of migrants reporting that they were current members and less than one percent saying they were former members. The need for further improvement in the dissemination of information about such networks is underscored by the high percentage (76%) of international migrants who reported to be unaware of the existence of such migration networks.

Patterns by background characteristics

- More females (27%) than males (21%) were aware of migration networks.
- International migrants with low education had lower level of awareness than those who are more educated. One in five (20%) migrants who are not high school graduates were aware of migration networks compared to one in four (25% each) among those who have completed high school and those with college education.
- As shown in **Figure 8.1**, awareness of migration networks was highest among migrants from CAR (44%) and Eastern Visayas (41%) and lowest in Central Luzon (9%) and ARMM (12%). Membership in migration networks was highest in SOCCSKSARGEN (5%) and CALABARZON (4%) (**Table 8.1**).

8.2 DIFFICULTIES EXPERIENCED UPON RETURN

Half (51%) of the return migrants admitted experiencing difficulty since they returned to the country (**Table 8.2**). Among migrants who reported any difficulty, searching for employment was the most commonly cited difficulty (70%). A far second is the difficulty finding a job corresponding to their skills (12%), followed by the difficulty establishing a business (10%). Four percent each reported reintegration into society and mismatched skills acquired abroad with jobs available in the country while

2% cited security issues. Apart from the difficulties mentioned, at least 25 % of the migrants cited other difficulties such as financial concerns and estrangement of relationships.

Patterns by background characteristics

- Slightly more males than females (52% vs. 50%, respectively) reported difficulty upon returning to the country.
- The percentage of migrants who experienced any difficulty decreases with rising level of education, from 61% among those who did not complete high school to 47% among those who have reached the collegiate level.
- The same declining pattern is evident with increasing household wealth; from 76% reporting difficulty among those in the lowest quintile (poorest) to 43% among those in the highest quintile (wealthiest) (Figure 8.2).

Figure 8.1 Awareness of migration networks by region

Percentage of international migrants age 15 and over who are aware of migration networks organized by the government for overseas returnees

- Across regions, experience of difficulty was highest among international migrants residing in ARMM (82%) and lowest among those in the Ilocos Region (33%) (Figure 8.3)

8.3 SUPPORT RECEIVED FROM THE PHILIPPINE GOVERNMENT AND OTHER SOURCES

In addition to migration networks, there are several programs, instituted by government agencies and non-government organizations, that provide support to facilitate the migrants' return to the country and to ease their reintegration to their community. These include, among others, the repatriation program of the Department of Foreign Affairs, the reintegration services package of the Department of Labor and Employment, and the free skills training program for OFWs and their family members of the Technical Education and Skills Development Authority (TESDA).

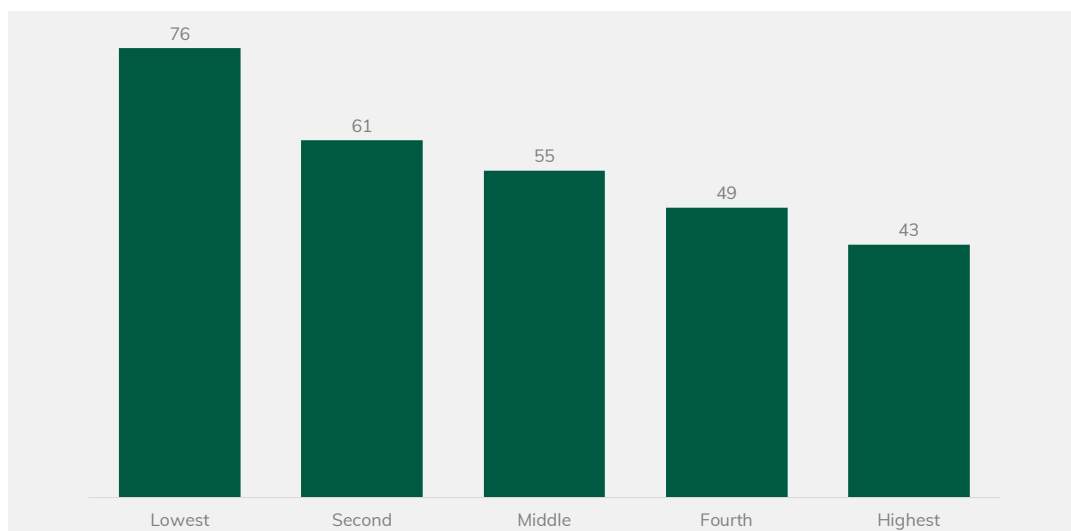

Did migrants receive any support from the government for their return to the country or upon their return? Very few (4%) of the migrants responded affirmatively. An overwhelming majority (96%) of migrants responded that they did not receive any government support (Table 8.3). Only 2% received support either for their return or upon their return to the country, while 1% received support both for their return and upon return. Another 5% of migrants also received support from sources other than the government.

Patterns by background characteristics

- Given that very few migrants received support for or upon their return to the

Figure 8.2 Difficulty experienced upon return to the country, by wealth quintile

Percentage of international migrants age 15 and over who experienced any difficulty upon return to the country

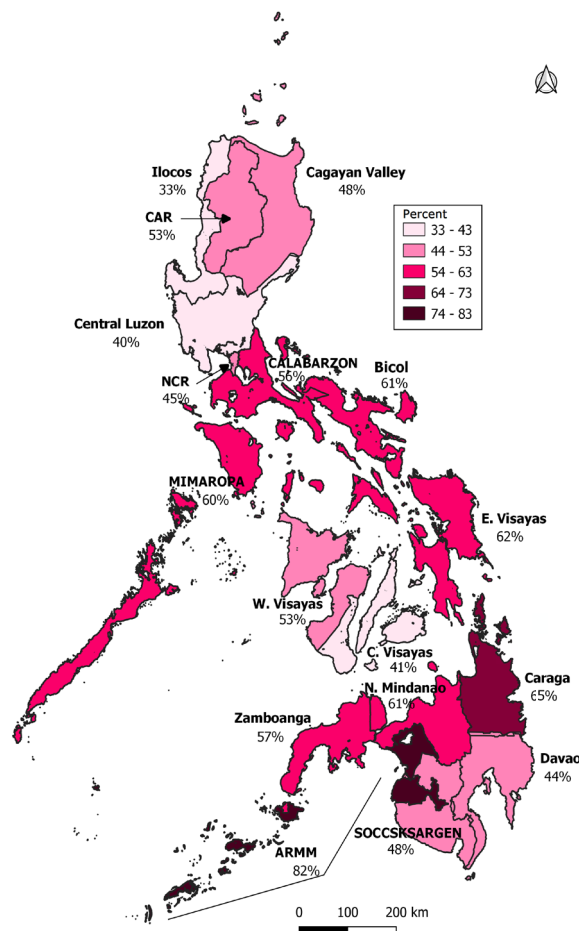

country, there are no substantial variations in the migrants' receipt of support across the categories of background characteristics except for region of residence.

- Nearly all migrants in NCR, Western Visayas, and Central Visayas had not availed of assistance from the government. The regions with the highest percentage of migrants who received support from the government are CALABARZON (11%) and Central Luzon (10%).
- Likewise, CALABARZON and Central Luzon had the highest percentage of return migrants who received assistance from other sources (12% and 14%, respectively).

The three most common types of government support received by migrants either prior to or upon their return to the country are assistance in the forms of welfare (42%), financial (36%), and livelihood (17%) (Table 8.4). Nine percent of migrants received legal assistance while 2% each were recipients of training or scholarship, employment support, and other types of government assistance.

Figure 8.3 Difficulty experienced upon return to the country by region

Percentage of international migrants age 15 and over who experienced any difficulty upon return to the country

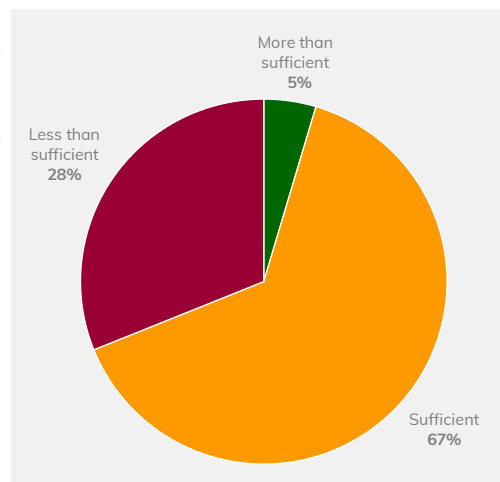

Among males, financial assistance (42%) was the predominant type of government support received, followed by welfare (34%) and livelihood (23%). Half of female migrants were recipients of government welfare assistance, the main form of support they received. Also worth noting is the substantial 14% of females who reported receiving legal assistance from the government, considerably larger than the percentage among males (5%).

8.4 FINANCIAL SITUATION AFTER RETURN

One of the major concerns of returning migrants, particularly labor migrants, is their economic situation when they return to the country. In the survey, migrants who went abroad in the past five years were asked to assess the sufficiency of their financial resources to meet the basic needs of their households after the last time they returned to the country. As shown in **Figure 8.4**, nearly seven in 10 migrants reported that their financial resources are sufficient (67%) or more than sufficient (5%) to meet their household's basic needs after they returned to the country. The remaining 28% of migrants replied that their financial situation is less than sufficient to meet their household's needs.

Figure 8.4 Sufficiency of financial resources after return to the country

Percent distribution of international migrants age 15 and over by sufficiency of their financial resources to meet the basic needs of their household after their return to the country

Patterns by background characteristics

- More male than female returnees (72% and 63%, respectively) reported having sufficient financial resources after their return to the country (**Table 8.5**).
- The percentage of migrants with sufficient financial resources increases with increasing level of education and wealth quintile. As **Table 8.5** shows, the percentage of migrants reporting that they have sufficient or more than sufficient economic resources is highest among those who reached college and those belonging to the highest wealth quintile (wealthiest).

REMITTANCES

KEY FINDINGS:

- **Level of remittances:** There is a considerable level of remittance flows and financial exchange networks both within the Philippines and in other countries. About 16% of the population 15 years old and over received remittances and 10% sent remittances in the past year.
- **Sources of remittances:** Receiving remittances from international and domestic sources occurs at the same level, with 48% of respondents reporting they have received remittances from either source.
- **Sex differentials in remittances:** Females are more active participants in the remittance flows: 20% of females and 12% of males received remittances. The corresponding percentage who sent remittances are 11% and 9%, respectively.
- **Differentials in receiving remittances:** Higher percentages of the older cohorts, widowed or separated, unemployed, rural residents, and those living in the economically more deprived regions receive remittances, as compared to other population sub-groups.
- **Remittance flows:** Most (65%) of remittance flows received in the past year from abroad emanated from countries in the Asian region, and to a lesser extent from Northern America (21%) and Europe (8%). The median amount of cash transferred is PhP26,000.
- **Mode of sending remittances:** Money transfer operations (MTO) are the most predominant mode for transferring remittances both at the domestic and international levels.
- **Use of remittances:** Remittances are mostly used to purchase basic necessities particularly food and other household needs, and for human development investments, particularly education and health.

The Philippines is among the largest and leading remittance recipients in the world, ranking third highest after India and China (World Bank, 2016). The remittances received have become the single most important source of foreign exchange to the country's economy (Ang, et al., 2009). Over the past two decades, the Philippines has recorded a steady stream and an increasing inflow of remittances, which have helped prop up domestic income and help sustain the country's economic development. Cash remittances improve living standards of families left behind. The remittances are partly invested in human capital development such as education and health.

This chapter presents the characteristics of international and domestic remittances in the country, taking into account (1) level and differential patterns of receiving and sending remittances across population subgroups and (2) direction, volume, and amount of remittance flows.

9.1 LEVEL AND DIFFERENTIALS OF RECEIVING AND SENDING REMITTANCES

The analysis for this section is based on the number of respondents reporting whether or not they have received or sent remittances within the year preceding the survey.

Remittance. Level of receiving, or the inflow of, remittances is based on the question: In the past 12 months (July 2017 to June 2018), did you receive money/cash remittance from anyone living in another city/municipality and province or country?

The reverse flow, i.e., the level of outflow of remittance is determined from the question: In the past 12 months, did you send/give money/cash remittance to anyone living in another city/municipality and province or country?

Definition: Respondents age 15 and over

Results indicate that there are more members of the population 15 years old and over who have received than sent remittances in the past 12 months. At least 16% received remittances as compared to 10% who sent remittances. Females were more active participants than males in the remittance flows, both as receivers (20% for females vs. 12% for males) and senders of remittances (10% vs. 8%, respectively, **Table 9.1**).

An equal proportion of respondents (48% each) received remittances from international or domestic sources while 4% received from both sources (**Table 9.1**). The height of the columns in **Figure 9.1** shows the level who received remittances by sex (12% for males and 20% for females). The percent share of origin of remittance shows slightly more males than females received remittances from outside the country (50% vs. 47%, respectively).

Similarly, the height of the columns in **Figure 9.2** shows the level who sent remittances by sex (9% for males and 11% for females). The percent share of destination of

remittance shows almost all (98%) were sent to domestic destinations; a negligible proportion were sent overseas (2%). There is no sex difference in the level of remittances sent.

Patterns by background characteristics

Level of remittances varies across different sectors of the population.

- There was a higher level of remittances received by the females, older cohorts, those whose marriage was dissolved due to death of spouse (widowed) or separation (divorced/separated/ annulled), unemployed, rural residents, and living in the economically more deprived regions such as Eastern Visayas, Zamboanga Peninsula, MIMAROPA, Bicol, and Cagayan Valley (Table 9.2, Figure 9.3).
- The age gradient is particularly evident in the proportion receiving remittance, which increases monotonically with advancing age, specifically, from 10% among those in the age group 15-19 years, to 21% among the older people (i.e., 60 years old and over).
- The NCR respondents recorded the second lowest level of remittances received (13%) but ranked the highest in terms of sending remittances (16%). Another high remittance-sending region is MIMAROPA (15%, Figure 9.4). Unlike the NCR, however, this region also ranked high in terms of receiving remittances.
- Compared to other population sectors, those who are highly educated and those in the richest quintile reported higher levels of inflow and outflow of remittances. For both subgroups, at least a fifth received remittances in the past year and around one in 10 sent remittances.

Figure 9.1 Origin of remittances received

Percentage of population age 15 and over who received remittances in the past 12 months, by origin of remittance and by sex, Philippines 2018 NMS

Figure 9.2 Destination of remittances sent

Percentage of population age 15 and over who sent remittances in the past 12 months, by destination of remittances and by sex, Philippines 2018 NMS

- Corollary to the foregoing findings, those with the lowest education and in the lowest wealth strata are the least active in the remittance exchange flows. For example, about 10% among those with no education received remittances, which is about half of those in the opposite end of the education spectrum (i.e., 22% for those who have completed a college degree or higher). The corresponding percentages for those who sent remittances are 3% and 15%, respectively.
- In like manner, 12% of those in the lowest quintile received remittances and half that proportion (6%) sent remittances. This finding means that even those in the poorest sector of the population manage to transfer wealth and participate in the exchange of financial flows in the country.

Figure 9.3 Receipt of remittances by region

9.2 DIRECTION, VOLUME, AND AMOUNT OF REMITTANCE FLOWS

In this section, remittance flows rather than individual respondents are used as unit of analysis in determining the direction, volume, and amount of remittances received and sent.

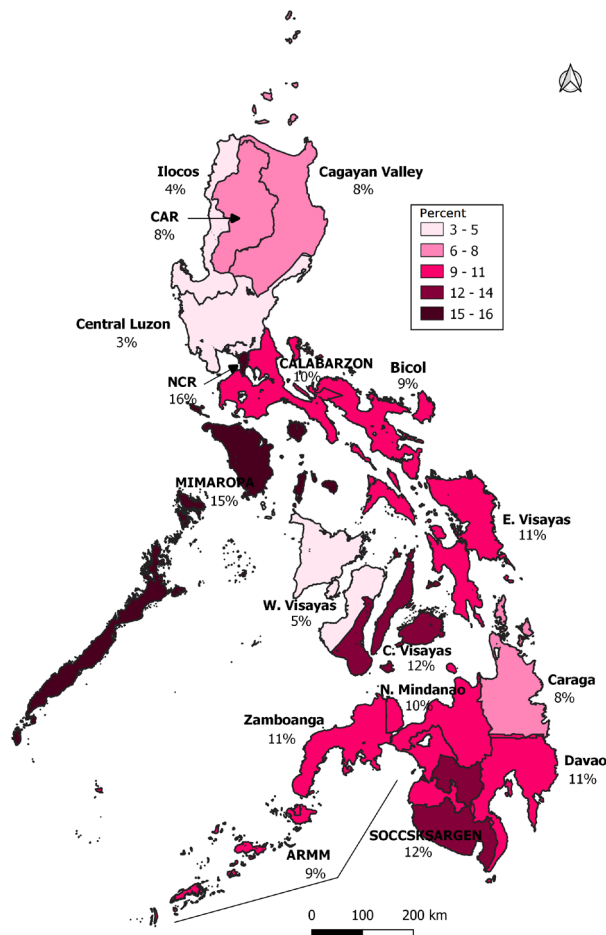

Remittances received from outside the country

A person may receive remittances from multiple sources within the year. For those who received remittances more than once from a particular source, the total amount received from that same source was used to estimate the amount of remittance from that particular flow.

Table 9.3 presents the remittances coming from outside the country classified in terms of the region of origin, amount, mode of transfer, and use.

Figure 9.4 Sending of remittances by region

Percentage of population age 15 and over who sent remittances in the past 12 months, Philippines 2018 NMS

Two-thirds (65%) of remittance flows received in the past year from abroad emanated from countries in the Asian region. A fifth (21%) came from Northern America while 8% came from Europe. The median amount of cash transferred is PhP26,000.

Cash transfers were mainly done through money transfer operators (MTOs, 72%). Banks accounted for a mere 26% of the total inflows from overseas. Informal channels such as family and friends accounted for 4%, while other modes including agency and other means were used in less than 1% of cash transfer transactions.

Remittances from outside the country were mostly invested in basic necessities, especially food and other household needs (75%). A substantial proportion also went to human development investments, particularly education (42%) and medical expenditures (30%). A tenth of remittances were used to pay debts while the rest were spent on investments (5%), purchase of consumer durables (4%), house and lot (4%), and motor vehicles (2%).

Remittances received from within the country

Table 9.4 shows the equivalent picture for remittance flows emanating from within the country.

A third (33%) of remittance flows from within the country originated from the NCR, trailed by CALABARZON (16%) and Central Visayas (10%, **Figure 9.5**). These three regions accounted for about 60% of the domestic remittance flows; Central Luzon (6%), Davao (6%), and the rest of the 12 regions in the country accounted for the remaining remittances. The amount of flow was relatively low, with a median value of PhP5,000.

Use of MTO was the dominant means for transferring local remittances (90%). Banks and informal means (i.e., sent through friends and family) each accounted for 5% of the total domestic financial transfers.

Just like the international remittances, domestically-sourced transfers were mostly used to purchase basic necessities such as food and other household needs (73%), and to pay for education (34%) and medical expenses (20%). Local remittances were also occasionally used to pay debts (7%). A very small proportion (4%) was invested as savings.

Remittances sent to international destinations

As mentioned earlier, the remittances sent beyond the Philippine borders in the year prior to the survey was relatively miniscule, accounting for a mere 2% of the total remittance flows. Most of these were directed towards Asian destinations (67%). Less than one-fifth of the remittances were sent to North America (17%) and Europe (14%). The median amount sent was PhP60,000 (**Table 9.5**), which is more than twice the median amount of the reverse flow, i.e., received from overseas for the same timeframe.

MTO was also the most preferred mode for transferring money abroad (76%). Remittance through banks was less common (27%). These transfers were mostly intended for basic necessities, education, medical expenses, debt payments, savings, and purchase of house and lot.

Remittances sent to domestic destinations

Table 9.6 presents the data on the remittance flow sent within the Philippines by region of destination, amount sent, mode of transfer, and reason for sending the remittance.

The NCR came out as the top destination for domestic remittances. It must be noted, however, that the NCR also accounted for the biggest proportion of remittances sent out (see **Table 9.4**). Its neighboring region, CALABARZON, ranked second top

Figure 9.5 Origin of domestic remittances by region

Percent distribution of remittance flows received from within the Philippines in the past 12 months, by region of origin, Philippines 2018 NMS

destination of local remittances followed by Central Visayas. The median level of remittance is PhP5,000, which is similar to the level of remittances received.

The MTO also emerged as the top choice for sending domestic remittances (94%), with the banks ranking a distant second (5%). Domestic remittances sent were mostly spent on basic necessities, and education and health expenditures. They were less frequently used for paying debts, investments, and savings.

INVOLUNTARY LABOR OR WORK ARRANGEMENT

KEY FINDINGS:

- **Prevalence of involuntary work arrangement:** Among those who ever worked, 4% experienced at least one involuntary work arrangement.
- **Migration status differentials in involuntary work arrangement:** Only a few internal migrants (3%) and non-migrants (2%) who ever worked have experienced any involuntary work arrangement. Fifteen percent of those with international migration experience only and 23% of those with both internal and international migration experience ever experienced an involuntary work arrangement.
- **Help-seeking:** Of those who have ever experienced an involuntary work arrangement, only 29% sought help.
- **Sources of help:** The most common sources of help are family/friends/relatives, government agency/representatives, and the Philippine embassy.

An important section in the 2018 National Migration Survey looks into the experience of involuntary work arrangements. These refer to the experience of negative work conditions that are not of the workers' own making and that they, in all likelihood, neither expected nor acceded to voluntarily. These conditions could be encountered at any time in the course of a person's working life. To gather the needed data, a list of specific involuntary work arrangements were presented to the respondents and they were asked to indicate if they ever experienced each item in the list. The list was asked only of those who ever worked and there was no specific reference period for reckoning the experience of involuntary work arrangement.

Involuntary work arrangements. Experience of negative work conditions that are not of the workers' own making and that they, in all likelihood, neither expected nor acceded to voluntarily

Sample: Respondents age 15 and over who have ever worked

10.1 SEX DIFFERENTIALS IN INVOLUNTARY WORK ARRANGEMENT EXPERIENCE

Table 10.1 presents the percentage of respondents who have ever worked, in total and by sex, who have ever experienced an involuntary work arrangement. In general, this experience is not common; only about 4% of those who ever worked experienced it. There are slightly more females (4%) than males (3%) who have experienced involuntary work.

Among those who experienced involuntary work arrangements, the most commonly reported were taking up employment not according to the provisions of the work contract or agreed terms (45%), and not having possession of one's own identification documents (29%), and not being able to come from and go to work as pleased (29%).

10.2 MIGRATION STATUS DIFFERENTIALS IN INVOLUNTARY WORK ARRANGEMENT EXPERIENCE

Table 10.2 differentiates the experience of involuntary work arrangement by the person's migration status. In this table, migration status refers to moves within the person's lifetime. The same definition of internal and international migrant used in Chapter 4 is used to categorize respondents according to migration status. The reference period is from birth to the time of the survey. A migrant status of "Both" means the person experienced both internal and international moves.

As shown in **Table 10.2** and **Figure 10.1**, there is a substantial difference in the experience of involuntary work arrangements between those who experienced an international move and those who did not. Compared to international migrants, internal migrants only and non-migrants both have lower prevalence of ever experiencing an involuntary work arrangement, at 3% for internal migrants and 2% for non-migrants. In contrast, 15% of those who experienced international migration only, and 23% of those with both internal and international migration experience reported ever having experienced an involuntary work arrangement.

Zeroing in on those who ever experienced an involuntary work arrangement (**Table 10.2**), the most common involuntary work arrangements reported by migrants with both internal and international experience (Both) are having their identification documents in someone else's custody to keep them from leaving (63%), taking up employment not according to the provisions of the work contract (57%), not being able

to come and go from work as they pleased (29%), and pressured or forced to engage in any work against their will (22%). Among those who experienced international migration only, these conditions are also the most commonly reported. Among those with no international migration experience (internal migrants and non-migrant) the most commonly reported involuntary work arrangements are taking up employment not according to the provisions of the work contract (40% for internal and 41% for non-migrant), not being able to come and go from work as they pleased (30% for internal and 15% for non-migrants), and being pressured or forced to engage in any work against their will (23% for internal and 21% for non-migrant).

Figure 10.1 Experience of involuntary work arrangement by migration status

Percentage who experienced involuntary work arrangement by migration status

10.3 SEX DIFFERENTIALS IN HELP-SEEKING BEHAVIOR

Of those who had ever experienced an involuntary work arrangement, close to three in 10 (29%) sought help, with the percentage seeking help about the same for men and women (Table 10.3 and Figure 10.2). Those who sought help were asked further from whom help was sought. The respondent was allowed to give as many as three sources of help. Results shown in Table 10.3 indicate that the most common source of help were family/friends/relatives, mentioned by 43% of those who sought help. The second most common source of help was a government office/representative, mentioned by 24% of respondents.

Disaggregating the data by sex, results show that more women sought help from family/relatives/friends (46%) than did men (39%) while more men sought help from government offices/representatives (30%) than did women (19%). Furthermore, more women sought help from the Philippine embassy than did men (13% for women, 8% for men).

As for the outcome of help sought, respondents were again allowed to give at most three responses. In all, 47% of those who sought help reported that through their help-seeking, the situation was resolved. However, three in 10 reported that they were ignored by the people they sought help from. About one in five said they were rescued, and 14% reported that they received emotional support or were comforted. There is a gender difference in the outcome of help-seeking. More women than men reported that they received emotional support (18% for women, 9% for men) while more men reported that as a result of their seeking help, a complaint/case was filed (12% for men vs. 5% for women).

Among those who experienced an involuntary work condition but did not seek help, the most common reasons cited for not seeking help were that they were afraid (18%) or that they thought no one would listen or believe them (18%). More women than men said they were afraid (23% of women vs. 12% of men) while slightly more men (18%) than women (14%) said they did not think anyone would listen to them.

Figure 10.2 Experience of involuntary work arrangement and help-seeking

Percentage who have experienced involuntary work arrangement and among them, percentage who sought help

10.4 MIGRATION STATUS DIFFERENTIALS IN HELP-SEEKING BEHAVIOR

Differentiating the data by the respondents' migrant status, it was found that a third of those with both internal and international migration experience who had encountered an involuntary work condition sought help (33%), the highest of all the migrant types (Table 10.4). The second highest percentage who sought help for an involuntary work condition are the non-migrants (31%).

For all migrant types, help was most commonly sought from family/friends/relatives and from a government office/representative. Among those with both internal and international migration experience, about a fifth reported that they also sought help from the Philippine embassy. As to the result of the help sought, the most common response was that the problem was solved. However, the second most common response was that the respondents were ignored by those they sought help from. This pattern of response is true of all migrant types. For those with both internal and international migration experience, three in 10 of those who sought help were rescued.

For those who did not seek help, the most common reason for not seeking help, across all migrant types, was that they were afraid; the second most cited reason was they thought no one would listen to/believe them. More of those with international migration experience, as compared to those without this experience, said they believed that the involuntary work arrangement was normal/part of the work/contract signed.

MIGRATION INTENTIONS

KEY FINDINGS:

- **Migration intentions:** About one in seven Filipinos (14%) intend to migrate in the next five years. Migration intention is highest among those who have previous internal and/or international migration experience, young adults, those not in union, and residents of ARMM, CAR and NCR. The percentage planning to move in the next five years increases with increasing education and wealth.
- **Intended migration destinations:** More than one in three Filipinos who intend to migrate plan to move abroad (36%); the rest plan to migrate within the Philippines. The United States (17%), Canada (13%), United Arab Emirates (11%), and Saudi Arabia (11%) are the top preferred destination countries. CALABARZON and NCR are the top choices for local migration.
- **Main reasons for migrating or not migrating:** Employment is the main driver of planning to migrate in the next five years (44%). The main reason Filipinos do not intend to migrate is housing-related (36%).

The culture of migration in the Philippines has emerged in the last several decades with many Filipinos wanting to work abroad despite difficulties they might encounter (Asis, 2006). Work, as reported in Chapter 5, is the main reason for migration for both international and internal migrants.

Analyzing migration intentions, therefore, is important in understanding the complexity of migration and how it is executed. In the 2018 NMS, all individual respondents were asked if they have plans to move or reside in another city or municipality in the Philippines, or in another country, in the next five years. They were

also asked for their destination choices and reasons for moving. Those who do not plan to move were asked for their reasons as well.

11.1 MIGRATION INTENTIONS

Table 11.1 shows the distribution of the population age 15 and over by their intention to migrate within the next five years. Overall, about one in seven Filipinos (14%) had intentions to migrate in the next five years.

Patterns by background characteristics

- Slightly more females than males (14% vs. 13%) and the young adults (less than 30 years old, 38%) had intentions to migrate.
- Except for the widowed, about 17% to 18% of those who were not in a marital union expressed plans to change residence within the next five years.
- The percentage of the population who plan to migrate increases as education increases (**Figure 11.1**).
- Migration intentions vary little between those who were employed (13%) and not employed (14%) Filipinos.
- The percentage of the population with plans to migrate is almost twice higher in the wealthiest wealth quintile than in the lowest quintile (**Figure 11.2**).
- More residents of urban areas (16%) than residents of rural areas (11%) said that they plan to migrate within the next five years.

Figure 11.1 Migration intentions by education

Percentage of the population age 15 and over who intend to move within the next five years, by highest educational attainment, Philippines 2018 NMS

Figure 11.2 Migration intentions by household wealth

Percentage of the population age 15 and over who intend to move within the next five years, by household wealth, Philippines 2018 NMS

- Plans to migrate in the next five years were highest among those from ARMM (23%), followed by those from CAR (21%) and NCR (20%). They were lowest among those from Western Visayas (6%).
- By migration experience, the highest percentage who plan to migrate in the next five years was among those who experienced both internal and international migration (26%). Twelve percent of those who have never migrated have plans of moving in the near future.

11.2 INTENDED MIGRATION DESTINATIONS

Overall, more than one in three Filipinos who said that they intend to migrate in the next five years plan to move to another country (36%). However, nearly half of them were undecided on the specific country they would like to move to (49%). Among those who had a particular country in mind, 30% chose North America as their destination (17% in the United States and 13% in Canada). The next most preferred region was the Middle East, particularly the United Arab Emirates (11%) and Saudi Arabia (11%, **Table 11.2**).

Sixty-four percent of those who intend to migrate in the next five years plan to move within the Philippines. Developed and highly urbanized regions like CALABARZON and NCR were the top local destination choices (20% and 17%, respectively), followed by Central Visayas (11%) and Central Luzon (9%, **Figure 11.3**).

As also shown in **Table 11.2**, both males and females who expressed plans to move abroad chose the United States and Canada as their top two destination countries. However, more males than females listed the United Arab Emirates and Saudi Arabia as their preferred destination countries. It is also notable that 8% of the females had plans to move to Hong Kong. The top destinations among those who planned to move within the country do not vary much between males and females.

Examination of the destination choices by migration status, that is, by whether the individual has experienced migration (international only, internal only, both international and internal), or not (**Table 11.3**), reveals some important patterns. Most of the migrants who have international migration experience also had plans to migrate abroad (66%); similarly, most of the migrants who have moved within the country were also planning to move again within the next five years to another place within the Philippines (73%). Among non-migrants, 58% had plans to migrate within the country.

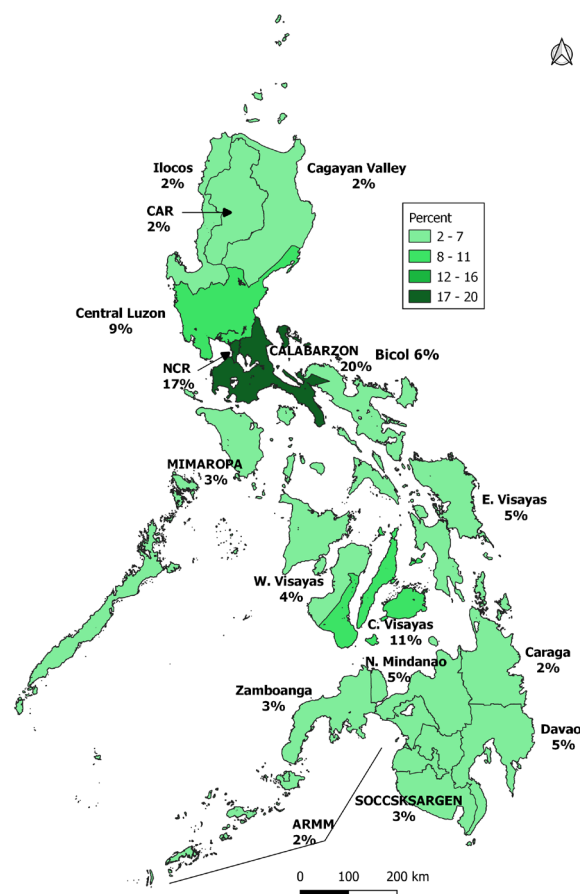

Probably owing to their migration experience, those who have migrated internationally already had a country in mind as their destination, the top two countries being Saudi Arabia (14%) and United Arab Emirates (13%). The same two countries, along with the United States and Canada, were also the top destination choices of internal migrants and non-migrants who would like to migrate in the next five years.

Among the internal migrants who would like to move to another place within the Philippines, CALABARZON (18%), NCR (16%), and Central Visayas (12%) were their top destination regions. Among non-migrants, their top choices were likewise CALABARZON and NCR (20% each) followed by Central Luzon (14%) and Central Visayas (9%).

Analysis of differentials by educational attainment (see **Table 11.4**) reveals that plans to move to places closer to home were higher among the less educated than the more educated members of the population. Seventy-five percent of those with less than high school education said that they plan to migrate within the Philippines; the corresponding figure for those who graduated from high school is 64%, and for those with at least some college education, 55%. Stated differently, more higher educated individuals had plans to migrate abroad than those with lower education (**Figure 11.4**).

Figure 11.3 Migration by intended regional destination

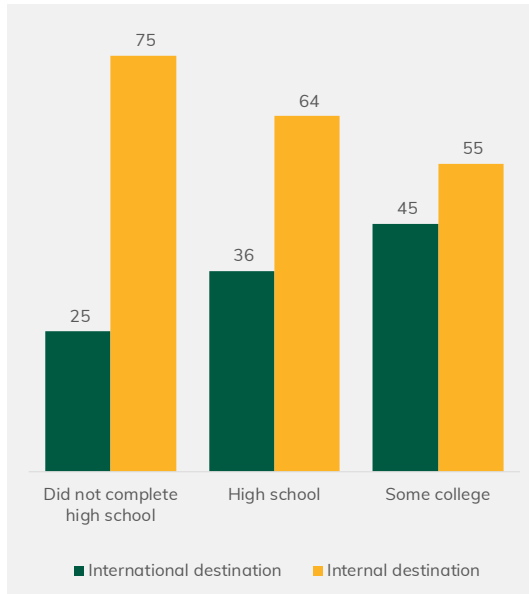

Percentage who intend to move within the Philippines in the next five years by intended regional destination, Philippines 2018 NMS

There are no differences in the top destination choices across educational attainment. Among those with plans to migrate internationally, Saudi Arabia (19%) was the top destination choice of those with less than high school education and the United States (14% + 14%), for those with at least high school education.

Figure 11.4 Type of intended move by education

Percent distribution of the population age 15 and over who intend to move within the next five years, by type of move and by highest educational attainment, Philippines 2018 NMS

11.3 MAIN REASONS FOR PLANNING TO MIGRATE OR NOT

Those who intended to move in the next five years plan to do so mainly for employment-related reasons (44%), more so among males (46%) than females (41%, **Table 11.5**). Others plan to move because of factors related to housing (27%) and living environment (10%).

In contrast, housing-related reason (36%) was the top reason for not intending to move in the next five years (**Table 11.6**). Housing-related reason may include ownership of house in current residence or difficulty in finding a house elsewhere. This is followed by reasons related to the living environment (22%) and employment (16%).

APPENDIX A

SAMPLING DESIGN

A.1 Introduction

The National Migration Survey 2018 (NMS 2018) is the first nationwide survey on migration in the Philippines with a nationally representative sample of approximately 45,000 housing units.

The NMS 2018 is designed to provide baseline information on internal and international migration of Filipinos.

The sample for the NMS 2018 is designed to produce a representative result for the country as a whole, for urban and rural areas separately, and for each of the 17 regions in the country: National Capital Region (NCR), Cordillera Administrative Region (CAR), Region I (Ilocos Region), Region II (Cagayan Valley), Region III (Central Luzon), Region IVA (CALABARZON), MIMAROPA Region, Region V (Bicol), Region VI (Western Visayas), Region VII (Central Visayas), Region VIII (Eastern Visayas), Region IX (Zamboanga Peninsula), Region X (Northern Mindanao), Region XI (Davao), Region XII (SOCCSKSARGEN), Region XIII (Caraga), and Autonomous Region in Muslim Mindanao (ARMM).

A.2 Sample Frame

The sampling frame used for the survey is the 2013 Master Sample Frame (MSF) designed and compiled by the Philippine Statistics Authority (PSA).

Administratively, Philippines is divided into 17 regions with each region comprising of provinces, some with highly urbanized cities (HUC) or other special areas. Provinces are subdivided into cities and municipalities. HUCs, cities, and municipalities are further subdivided into barangays. The barangay is the smallest local government

unit. At the time of the study, the country has a total of 81 provinces, 145 cities including 33 HUCs, 1,489 municipalities, and 42,036 barangays, of which 5,697 are urban barangays and the remainder are rural barangays.

The MSF's primary sampling unit (PSU) can be a barangay, a portion of a large barangay, or two or more adjacent small barangays. The PSUs were initially constructed based on the results of the 2010 Census of Population and Housing (CPH) and were updated based on the 2015 Census of Population conducted in August 2015. The 2015 POPCEN was used to reconstruct the PSUs and 2015 lists of housing units were used as the Secondary Sampling Unit (SSU) frame. There is a total of 87,098 PSUs formed out of 42,036 barangays. There are also 910 barangays that were reported as least accessible and excluded from the MSF.

The MSF is a compilation of all possible systematic samples of PSUs in the country. Samples in the MSF are stratified according to 117 sampling domains in the country as follows: 81 provinces (including the newly created province Davao Occidental); 33 highly urbanized cities (including 16 cities in the National Capital Region); and 3 other special areas (Pateros, Isabela City, and Cotabato City). Each province/HUC domain has urban and rural PSUs except for the domain in NCR where all PSUs are urban. Within each province/HUC domain, all PSUs are grouped into replicates of 3 to 8 PSUs. For example, the City of Manila has 198 replicates, which means that out of 1,584 PSUs in Manila, 198 systematic samples/replicates were formed where each replicate has about 8 PSUs. Before forming the replicates, and within each province/HUC domain, all PSUs were ordered and sorted according to the following: (1) north-south/west-east geographic location; (2) decreasing proportion of households with overseas workers; and, (3) decreasing wealth index, to achieve implicit stratification using these variables

A.3 Sample Design and Implementation

Four (4) replicates of the MSF were used as sample in the NMS 2018. The first stage involved a systematic selection of 2,940 primary sampling units (PSUs) distributed by province or HUC.

In the second stage, an average of 12 (for HUCs) or 16 (for provinces) sample housing units were selected from each sampled PSU based on proportionate allocation and using systematic random sampling.

In the second stage, the sample housing units were selected from each sampled PSU using a probability proportional to size (PPS). In situations where a housing unit contained one to three households, all households were included in the study. In the rare situation where a housing unit contained more than three households, interviews were limited to a maximum of three households. Only the pre-selected households were interviewed.

The following were interviewed in each sampled housing unit/household: (1) all individuals aged 15 years and over who ever had an international migration experience (international migrant); (2) one randomly selected individual aged 15 years and over who ever had an internal migration experience (internal migrant); and (3) one individual age 15 years and over who had no migration experience (non-migrant), randomly selected among all eligible respondents.

Replacement of housing units and households were allowed. Replacements were pre-selected and were provided to the teams together with the list of original samples. A maximum of three (3) replacement households per sample PSU were allowed.

Housing units were replaced if they were found ineligible during the enumeration. A housing unit was considered ineligible if:

1. The housing unit was vacant;
2. The housing unit had been destroyed or demolished;
3. The given address was not a housing unit or there was no housing unit in the given address, and;
4. Other reasons:
 - Had permanently moved out of the housing unit
 - Had merged with another household in the same housing unit
 - Not a permanent resident of the housing unit
 - The single-person household occupying the housing unit had passed away

Households were replaced if they were found ineligible during the enumeration. A household was considered ineligible if the entire household had been absent for an extended period of time. However, new housing units that were constructed 1 year before the survey were not included in the frame, which may result in a slight bias.

APPENDIX B

SAMPLING ERROR

The estimates from a sample survey are affected by two types of errors: nonsampling errors and sampling errors. Nonsampling errors are the results of mistakes made in implementing data collection and data processing, such as failure to locate and interview the correct household, misunderstanding of the questions on the part of either the interviewer or the respondent, and data entry errors. Although numerous efforts were made during the implementation of the Philippines National Migration Survey (NMS) 2018 to minimize this type of error, nonsampling errors are impossible to avoid and difficult to evaluate statistically.

Sampling errors, on the other hand, can be evaluated statistically. The sample of respondents selected in the NMS 2018 is only one of many samples that could have been selected from the same population, using the same design and expected size. Each of these samples would yield results that differ somewhat from the results of the actual sample selected. Sampling errors are a measure of the variability among all possible samples. Although the degree of variability is not known exactly, it can be estimated from the survey results.

Sampling error is usually measured in terms of the standard error for a particular statistic (mean, percentage, etc.), which is the square root of the variance. The standard error can be used to calculate confidence intervals within which the true value for the population can reasonably be assumed to fall. For example, for any given statistic calculated from a sample survey, the value of that statistic will fall within a range of plus or minus two times the standard error of that statistic in 95% of all possible samples of identical size and design.

The NMS 2018 sample is the result of a multi-stage clustered design, and, consequently, it is necessary to use complex formulas for the estimation of the sampling errors. The sampling errors are computed in Stata, following the programs

developed by ICF for the National Demographic and Health Survey 2017. These programs use the Taylor linearization method to estimate variances for survey estimates that are means, proportions, or ratios.

The Taylor linearization method treats any percentage or average as a ratio estimate, $r = y/x$, where y represents the total sample value for variable y , and x represents the total number of cases in the group or subgroup under consideration. The variance of r is computed using the formula given below, with the standard error being the square root of the variance:

$$SE^2(r) = \text{var}(r) = \frac{1-f}{x^2} \sum_{h=1}^H \left[\frac{m_h}{m_h - 1} \left(\sum_{i=1}^{m_h} z_{hi}^2 - \frac{z_h^2}{m_h} \right) \right]$$

in which

$$z_{hi} = y_{hi} - rx_{hi}$$

$$z_h = y_h - rx_h$$

where

h represents the stratum which varies from 1 to H ,

m_h is the total number of clusters selected in the h^{th} stratum

y_{hi} is the sum of the weighted values of variable y in the i^{th} cluster in the h^{th} stratum

x_{hi} is the sum of the weighted number of cases in the i^{th} cluster in the h^{th} stratum,
and

f is the overall sampling fraction, which is so small that it is ignored.

Sampling errors for the NMS 2018 are calculated for selected variables considered to be of primary interest. The results are presented in this appendix for the country as a whole. For each variable, the type of statistic (mean, proportion, or rate) and the base population are given in Table B.1. Table B.2 presents the value of the statistic (R), its standard error (SE), the relative standard error (SE/R), and the 95% confidence limits ($R \pm 2SE$), for each selected variable.

Table B.1 List of selected variables for sampling errors, Philippines NMS 2018

Variables	Estimate	Base Population
Lifetime Migration by sex	Proportion	15 years old and over
Ever moved for 3 months or more since birth by sex	Proportion	15 years old and over
Migration experience in the last 5 years by type of migration and by background characteristics:		
Sex	Proportion	15 years old and over
Age groups	Proportion	15 years old and over
Marital status	Proportion	15 years old and over
Education	Proportion	15 years old and over
Employment Status	Proportion	15 years old and over
Place of Residence	Proportion	15 years old and over
Region	Proportion	15 years old and over
Wealth quintile	Proportion	15 years old and over

					Total	80,467	100.0	79,055	100.0

Note: The de jure population includes all usual residents of the household

Table C.2 Age distribution of eligible and interviewed

De jure household population, number and percent distribution of interviewed population age 15 and over, and percentage of eligible population who were interviewed, by 5-year age groups, Philippines NMS 2018

Age group	Household population 15+		Interviewed Migrants		Interviewed Non-migrants		Percentage of eligible household population interviewed
	Migrants	Non-migrants	Number	Percentage	Number	Percent	
15-19	1,264	4,816	1,031	3.8	4,342	22.6	88.4
20-24	2,264	2,715	1,711	6.3	2,343	12.2	81.4
25-29	3,485	2,264	2,520	9.3	1,991	10.4	78.5
30-34	3,820	2,084	2,923	10.7	1,893	9.9	81.6
35-39	3,973	1,825	3,130	11.5	1,666	8.7	82.7
40-44	3,597	1,392	2,899	10.7	1,273	6.6	83.6
45-49	3,381	1,243	2,784	10.2	1,176	6.1	85.6
50-54	2,962	1,147	2,572	9.5	1,077	5.6	88.8
55-59	2,558	980	2,238	8.2	916	4.8	89.1
60-64	2,057	870	1,867	6.9	815	4.2	91.6
65 and over	3,916	1,864	3,527	13.0	1,693	8.8	90.3
15 and over	33,277	21,200	27,202	100.0	19,185	100.0	85.1

Notes: The de jure population includes all usual residents of the household. Weights for both household population and interviewed population are individual weights. Interviewed population includes 32 who are non-Filipino citizens that were excluded from all tables in this report; it also includes 2,526 who were overseas at the time of the survey. Age is based on the Household Questionnaire.

Table C.3 Completeness of reporting*Percentage of observations missing information for selected questions (weighted), Philippines NMS 2018*

Subject	Percentage with information missing	Number of cases
Completion of high school/senior high school		
Usual place of residence - Country	0.06	14,634
Usual place of residence - Barangay ¹	6.84	14,596

APPENDIX E

NATIONAL MIGRATION SURVEY QUESTIONNAIRE FORM 1

**REPUBLIC OF THE PHILIPPINES
PHILIPPINE STATISTICS AUTHORITY
UNIVERSITY OF THE PHILIPPINES
NATIONAL MIGRATION SURVEY**

**JUNE 2018
HOUSEHOLD QUESTIONNAIRE**

CONFIDENTIALITY:
Section 26 of RA 10625, stipulates that individual data furnished by a respondent to statistical surveys and censuses of the PSA shall be considered privileged information and such shall be inadmissible as evidence in any proceeding.

Likewise, Section 27 of RA No 10625 states that a person, including parties within the PSA Board and the PSA, who breach the confidentiality of information, whether by carelessness, improper and behaviour with malicious intent and use of confidential information for profit shall be liable to a fine of five thousand pesos (Php 5,000.00) to not more than ten thousand pesos (Php 10,000.00) and or imprisonment of three months but not to exceed one year, subject to the degree of breach.

Sir/Madam:

The Philippine Statistics Authority (PSA), in collaboration with the University of the Philippines Population Institute (UPPI), is conducting a nationwide survey on migration. The survey aims to provide baseline data on internal and international migration in the Philippines. The information would assist our policy makers and program managers in evaluating and designing strategies for improving services and assistance to people going abroad or moving within the country.

Your household is one of the 45,000 sample households selected nationwide.

Please be assured that the data you supply will be treated **STRICTLY CONFIDENTIAL** and cannot be used for taxation, investigation or law enforcement purposes. The results will be published in the form of statistical summaries and no reference to any individual person shall appear. Your cooperation is sincerely appreciated.

In case you need more information about the survey, you may contact UPPI at nms.uppi@up.edu.ph.

Truly yours,

LISA GRACE S. BERSALES, Ph.D.
Undersecretary
National Statistician and Civil Registrar General

Earlier, we talked about household members currently residing here. Now I would like to ask you if there are persons who used to live in this household in the past 5 years (since January 1, 2013) who permanently moved and now residing abroad.

Kanina po, ang pinag-usapan natin ay tungkol sa mga taong palagiang naninirahan sa inyong sambahayan. Ngayon nais kong magtanong kung mayroon bang mga tao na noo'y naninirahan dito nitong nakalipas na 5 taon na ngayon (mula Enero 1, 2013) ay permanente nang lumipat at naninirahan na sa ibang bansa.

28 Are there any person/s who used to live in this household in the past 5 years (since January 1, 2013) who permanently moved abroad, that is, they were members of this household at the time of their departure? YES NO → GO TO Q39

Mayroon pa po bang ibang tao na dating naninirahan dito sa inyong sambahayan nitong nakalipas na 5 taon na ngayon (mula Enero 1, 2013) ay permanente nang lumipat at naninirahan na sa ibang bansa?

G. ALL FORMER HOUSEHOLD MEMBERS WHO PERMANENTLY MOVED AND NOW RESIDING ABROAD

MIGRATION SURVEY
QUESTIONNAIRE
FORM 2**

**REPUBLIC OF THE PHILIPPINES
PHILIPPINE STATISTICS AUTHORITY
UNIVERSITY OF THE PHILIPPINES**

NATIONAL MIGRATION SURVEY

JUNE 2018

INDIVIDUAL QUESTIONNAIRE

CONFIDENTIALITY:
Section 26 of RA 10625, stipulates that individual data furnished by a respondent to statistical surveys and censuses of the PSA shall be considered privileged information and such shall be inadmissible as evidence in any proceeding.

Likewise, Section 27 of RA No 10625 states that a person, including parties within the PSA Board and the PSA, who breach the confidentiality of information, whether by carelessness, improper and behaviour with malicious intent and use of confidential information for profit shall be liable to a fine of five thousand pesos (Php 5,000.00) to not more than ten thousand pesos (Php 10,000.00) and or imprisonment of three months but not to exceed one year, subject to the degree of breach.

Sir/Madam:

The Philippine Statistics Authority (PSA), in collaboration with the University of the Philippines Population Institute (UPPI), is conducting a nationwide survey on migration. The survey aims to provide baseline data on internal and international migration in the Philippines. The information would assist our policy makers and program managers in evaluating and designing strategies for improving services and assistance to people going abroad or moving within the country.

Your household is one of the 45,000 sample households selected nationwide.

Please be assured that the data you supply will be treated **STRICTLY CONFIDENTIAL** and cannot be used for taxation, investigation or law enforcement purposes. The results will be published in the form of statistical summaries and no reference to any individual person shall appear. Your cooperation is sincerely appreciated.

In case you need more information about the survey, you may contact UPPI at nms.uppi@up.edu.ph.

Truly yours,

LISA GRACE S. BERSALES, Ph.D.
Undersecretary
National Statistician and Civil Registrar General

Hello! My name is _____. I am working with the University of the Philippine Population Institute (UPPI). We are conducting a nationwide survey on migration. This survey aims to provide baseline data on internal and international migration in the Philippines. The information to be collected would assist our policymakers and program managers in evaluating and designing strategies for improving services and assistance to people going abroad or moving within the country.

All the answers you give will be confidential and will not be shared with anyone other than members of our survey team. Your cooperation and the information you will provide in this survey is important and highly appreciated.

In case you need more information about the survey, you may contact UPPI at nms.uppi@up.edu.ph.

Do you have any questions?

May I begin the interview now?

Kumusta po! Ako si _____. Nagtatrabaho po ako sa University of the Philippine Population Institute (UPPI). Kami ay nagsasagawa ng sarbey sa buong bansa ukol sa paglilipat-lipat ng mga tao sa iba't ibang lugar o pandarayuhan. Ang sarbey na ito ay naglalayon na makapagbigay pang-unang datos ukol sa paglilipat-lipat ng tirahan ng mga Pilipino sa loob at labas ng bansa at ang mga impormasyong ito ay makatutulong sa ating mga tagagawa ng polisiya at tagapamahala ng mga programa sa pagsusuri at pagdidisenyo ng mga estratehiya upang mapabuti ang mga serbisyo at tulong sa mga taong nangingibang bansa sa anumang layunin o lumilipat sa ibang siyudad/munisipyo sa Pilipinas.

Lahat po ng iyong kasagutan ay magiging confidential at hindi ibabahagi sa kaninuman, maliban sa mga miyembro ng aming pangkat. Ang iyong pakikiisa at ang mga impormasyon na ibibigay mo sa sarbey na ito ay lubhang mahalaga at

Kung may mga nais kayong malaman ukol sa sarbey na ito, maaari kayong makipag-ugnayan sa UPPI sa nms.uppi@up.edu.ph.

Mayroon po ba kayong anumang katanungan?

Maaari ko na bang simulan ang interbyu?

B. RESPONDENT'S BACKGROUND																			
NO.	QUESTIONS	CODING CATEGORIES	CODE																
200	<p>Since birth, have you ever moved and resided continuously for 3 months or more in any other city/municipality within the Philippines and/or abroad?</p> <p><i>Simula noong isilang ka, ikaw ba ay lumipat at naninirahan nang tuloy-tuloy sa loob ng 3 buwan o higit pa sa ibang siyudad/munisipyo dito sa Pilipinas at/o sa ibang bansa?</i></p>	<p>YES, WITHIN THE PHILIPPINES 1</p> <p>YES, ABROAD 2</p> <p>YES, BOTH WITHIN THE PHILIPPINES AND ABROAD 3</p> <p>NO 4</p>	<input type="checkbox"/>

Now, I would like to ask you about the changes in places of residence you have had since birth. By this I mean the places you have resided continuously for 3 months or more whether within the Philippines or abroad.

Ngayon, nais ko namang magtanong tungkol sa paglipat-lipat mo ng tirahan simula noong ika'y ipinanganak. Ang ibig kong sabihin, mga lugar kung saan tumira/nanirahan nang tuloy-tuloy sa loob ng 3 buwan o higit pa sa loob at/o labas ng Pilipinas.

311	PROBE: Just to make sure we have listed all the places you have moved to and resided in the past 5 years, is there any other place you have moved to and resided in continuously for 3 months or more between (your PLACE OF USUAL RESIDENCE in Q305 and 1st row, 1st row and 2nd row, ...)? <i>Para makasigurong tama ang lahat ng mga nailistang lugar na nilipatan at tinirahan mo sa nakalipas na 5 taon, mayroon ka pa bang ibang lugar na nilipatan at tinirahan nang tuloy-tuloy sa loob ng 3 buwan o higit pa sa pagitan ng (PLACE OF USUAL RESIDENCE in Q305 and 1st row, ...)?</i>	YES..... 1 GO TO 307 ← NO 2 IF THERE'S ANY 'YES' RESPONSE, GO BACK TO THE ABOVE MATRIX AND ENTER DETAILS IN Q307-Q310. USE ADDITIONAL BOOKLET IF NECESSARY.	<input type="checkbox"/>	PUT AN X MARK IF CONTINUATION SHEET IS USED → <input type="checkbox"/>																																																

400	CHECK 301B : FIRST MOVE TO/RESIDED IN ANY COUNTRY ABROAD
YES <input style="width: 30px; height: 20px;" type="checkbox"/>	NO <input style="width: 30px; height: 20px;" type="checkbox"/> → GO TO 700

Now I would like to ask you about your situations and motives the first time you moved to a country abroad as well as the time when you moved to the last country abroad, in the past five (5) years. I also have questions about migration networks you had and assistance you might have received from anyone when you were in the first and in the last country abroad. In this section, we will talk about your job/business while you were abroad.

Ngayon, nais kong magtanong tungkol sa iyong mga sitwasyon at motibo sa pinakauna mong pag-alis ng bansa, maging sa pinakahuli mong pag-alis nitong nakalipas na 5 taon. Mayroon rin akong mga katanungan tungkol sa migration networks at ang mga tulong na maari mong natanggap mula sa kaninuman noong ika'y nasa ibang bansa. Sa bahaging ito, pag-uusapan rin natin ang iyong trabaho/negosyo habang nasa ibang bansa.

Now I would like to ask you about engagement/joining in migration association that you might have while you were abroad. I will also ask about training and/or education you got abroad, if any.

Ngayon ay magtatanong naman ako tungkol sa pagsali mo sa samahan ng mga migrante habang nasa ibang bansa ka. Tatanungin ko rin ang tungkol sa anumang training at/o edukasyon na natanggap mo sa ibang bansa.

E. ENGAGEMENT IN MIGRATION ASSOCIATION AND TRAINING/EDUCATION ABROAD

605	<p>After you returned from (LAST COUNTRY ABROAD in Q442), was the financial situation of your household more than sufficient, sufficient, or less than sufficient for meeting all basic needs of your household?</p> <p><i>Sa pagbalik mo mula sa (LAST COUNTRY ABROAD in Q442), ang kalagayang pinansyal ba ng iyong sambahayan ay higit sa sapat, sapat lang, o kulang para matustusan ang pang-araw-araw na pangangailangan?</i></p>	<p>MORE THAN SUFFICIENT 1</p> <p>SUFFICIENT 2</p> <p>LESS THAN SUFFICIENT 3</p>	<div style="text-align: right; margin-right: 20px;"><input style="width: 30px; height: 20px;" type="checkbox"/></div>								

700	CHECK 306 : ANSWERED 1 OR 3, RESIDED IN ANY PLACE WITHIN THE PHILIPPINES IN THE PAST 5 YEARS
ANSWERED 1 OR 3 <div style="display: inline-block; border: 1px solid black; width: 20px; height: 20px; vertical-align: middle; margin-left: 10px;"></div> ↓	ANSWERED 2 OR 4 <div style="display: inline-block; border: 1px solid black; width: 20px; height: 20px; vertical-align: middle; margin-left: 10px;"></div> → GO TO 800

Now I would like to ask you about your situations and motives for moving to current residence from another city/municipality and province in the Philippines in the past five (5) years. I also have questions about migration networks you have and assistance you might received from anyone when you moved here. In this section, we will talk about job/business you might have.

Ngayon magtatanong ako sa iyo tungkol sa mga sitwasyon at motibo mo sa paglipat mo sa kasalukuyan mong tirahan mula sa ibang siyudad/munisipyo at probinsya sa Pilipinas nitong nakalipas na 5 taon. Mayroon din akong mga katanungan tungkol sa migration networks at ang mga tulong na maaari mong natanggap mula sa kaninuman. Sa bahaging ito, tatanungin kita tungkol sa trabaho/negosyo na mayroon ka.

G. INTERNAL MIGRATION

G.1. Pre-migration Situations and Motives for Moving to Current Residence in the Past 5 Years

NO.	QUESTIONS	CODING CATEGORIES	CODE
1000	CHECK 223 : EVER WORKED FOR PAY OR PROFIT YES <input type="checkbox"/>	NO <input type="checkbox"/>	END OF INTERVIEW

NOTE:

DUE TO THE SENSITIVE NATURE OF THE QUESTIONS IN THIS SECTION, IT IS VERY IMPORTANT THAT YOU DO EVERYTHING POSSIBLE TO ENSURE PRIVACY.

CHECK FOR PRESENCE OF OTHERS.
DO NOT CONTINUE UNTIL PRIVACY IS ENSURED.

Now I would like to ask you some questions about other important aspects of a worker's life. You may find some of these questions very personal. However, your answers are crucial help to better understand workers' condition in the Philippines and in other countries abroad. Let me assure you that your answers will be treated with utmost confidentiality and will not be divulge to anyone. No one else in your household will know that you were asked these questions.

First, I am going to ask you about some situations which may have happened to you.

Ngayon naman po, nais ko pong tanungin kayo tungkol sa mga importanteng aspeto ng buhay-manggagawa. Maaari po itong maging personal para sa inyo. Gayunpaman, ang inyong mga sagot ay napakahalagang tulong upang higit na maunawaan ang kalagayan ng mga manggagawa sa Pilipinas at sa ibang bansa. Sinisiguro ko po sa inyo na ang mga sagot ninyo ay magiging confidential at hindi sasabihin sa iba. Wala po sa mga myembro ng inyong sambahayan ang makakaalam na itinanong ko po ito sa inyo.

Una, tatanungin ko po kayo ng mga sitwasyon na maaring nangyari sa inyo.
